ABOUT THE DEPARTMENT

Petroleum Engineering Department has started its functioning from the Academic Year 2009-10 in GCE college of Engineering under JNTU Kakinada. From the 2020-2021 Academic year onwards the petroleum engineering department merged in GIET (Autonomous), Rajamahendravaram. Petroleum engineering is a field of engineering concerned with the activities related to the production of hydrocarbons, which can be either crude oil or natural gas. Exploration and Production are deemed to fall within the upstream sector of the oil and gas industry. Petroleum Engineering is a combination of innovation, exploration and expansion. This program trains students in petroleum engineering and focuses primarily on exploration and production of oil and gas. This stream provides a good knowledge of many other related disciplines such as geophysics, petroleum geology, drilling, economics, reservoir simulation, reservoir engineering and gas facilities engineering.

Who Can Attend: Students and Faculty from all the disciplines.

Registration Fee: No Registration Fee

Resource Person: Dr. R. Giriprasad, Associate Professor, AEC, Surapalem

Section 1

Brief Report of the Event

Background : A webinar on “Alternate fuels – I.C.Engines
Objectives of the program : The objective of this programme is to impart knowledge on the basics, analysis and applications of alternative fuels for IC engines energy. Participation in this programme will be helpful for young teachers engaged in research works in the synthesis, characterization and application of the alternative fuels in the field of automobile engineering. The Faculty Development Programme covers analytical and experimental technology that is used to study and understand the mechanisms and applications of alternative fuel technology.

Organization of Event : Mechanical Department
For whom : Research scholars, Academicians, Faculty and students.
Topics to be covered : Brief history of fossil fuels. The basics, analysis and applications of alternative fuels for IC engines energy.

Organizing team : Mr. A.Babji, Coordinator

Why Alternate Fuel

- > Social Interest
- > Economic
- > Geopolitical

Global Warming: The green house gases like carbon dioxide, methane, and nitrous oxide are major culprits.

Carbon dioxide stays in the atmosphere for approximately 100 years, methane lasts about 12 years. Other greenhouse gases last even longer.

CO₂ is the gas responsible for keeping the Earth's climate warm because it absorbs radiation that would otherwise leave the Earth's atmosphere and disperse into the upper atmosphere

- About 20% of CO₂ emitted in Atmosphere comes from burning gasoline in the engines of the vehicle
- Methane is obtained from resources such as rice paddies, bovine flatulence, bacteria in bogs and fossil fuel manufacture
- The main sources of nitrous oxide include nylon and nitric acid production, cars with catalytic converters, the use of fertilizers in agriculture and the burning of organic matter
- > Another major cause of global warming is deforestation. Deforestation is to be blamed for 25% of all CO₂ release entering the atmosphere
- > About 63% of fossil fuels are from middle east
- > By 2040 approximately half of the global energy supply will come from renewables

Atmosphere

Region	Height range (km)	Temperature range (°C)	Main constituents
Troposphere	0-11	15 to -56	O ₂ , N ₂ , H ₂ O, CO ₂
Stratosphere	11-50	-56 to -2	O ₃
Mesosphere	50-90	-2 to -92	O ₂ , NO*
Thermosphere	90-500	-92 to 1200	O ₂ , O*, NO*, N*

The diagram illustrates the vertical structure of Earth's atmosphere, divided into four main regions: Troposphere, Stratosphere, Mesosphere, and Thermosphere. Each region has specific height ranges, temperature profiles, and primary gas constituents. Key atmospheric phenomena are mapped across these layers:

- Troposphere:** Site of weather, clouds, and most life. It shows cooling with altitude.
- Stratosphere:** Contains the ozone layer (O₃) which absorbs UV radiation, causing warming with altitude.
- Mesosphere:** Characterized by cooling with altitude. It is where meteoroids burn up.
- Thermosphere:** Experiences extreme heating due to solar radiation, leading to ionization of gases (O₂, O*) and auroral displays.

 Processes shown include Global Warming (driven by greenhouse gases like CO₂ and CH₄), Acid Deposition (from SO₂ and NO_x), and Photochemical Smog (involving VOCs and NOx under sunlight). A small inset shows hands holding a globe, symbolizing climate change concerns.

BABJI ALAPATI Me Dr.A.Veeresh Babu Cohost 19551A0301 Abhishek.k... 19551A0303 <\$@!> 19551A0306

The screenshot shows a Cisco Webex meeting window. At the top, there's a title bar with "Cisco Webex Meetings (Moderated unminute mode)" and a "Meeting Info" button. Below it are tabs for "File", "Edit", "Share", "View", "Audio & Video", "Participant", "Meeting", and "Help". The main area displays a list of participants: "BABJI ALAPATI Me", "Dr.A.Veeresh Babu Cohost", "19551A0301 Abhishek.k...", "19551A0303 <\$@!>", and "19551A0306". On the right, a sidebar titled "Participants (92)" lists more names like "BA BABJI ALAPATI Me", "GY GIER MECH-4th Year Host", etc. The central part of the screen shows a presentation slide from NITW (National Institute of Technology Warangal). The slide contains a diagram of a watershed area with labels for various land uses and water bodies, and a map below it showing the location of the watershed.

Section 1

Git is an open-source, version control tool created in 2005 by developers working on the Linux operating system; GitHub is a company founded in 2008 that makes tools which integrate with git. You do not need GitHub to use git, but you cannot use GitHub without using git. There are many other alternatives to GitHub, such as GitLab, BitBucket, and "host-your-own" solutions such as gogs and gittea. All of these are referred to in git-speak as "remotes", and all are completely optional. You do not need to use a remote to use git, but it will make sharing your code with others easier.

The first two things you'll want to do are install git and create a free GitHub account.

Follow the instructions here to install git (if it's not already installed). Note that for this tutorial we will be using git on the command line only. While there are some great git GUIs (graphical user interfaces), I think it's easier to learn git using git-specific commands first and then to try out a git GUI once you're more comfortable with the command. A note: 95% of other online git resources and discussions will also be for the command-line interface.

Brief Report of the Event	[Seminar/Workshop/Conference/Guest Lecture etc.,]
Background	: Workshop on Source Code Management Using Git & Github
Objectives of the program	- To impart knowledge on Source Code Management Using Git & Github to the students & Faculty of engineering colleges across the state of Andhra Pradesh. - This course is for a candidate who wants to learn how to use git hub from scratch and work through a fully functional Project.
Organization of Event	: APSSDC & Department of CSE, GIET(A), Rajamahendravaram
For whom	: 2nd year students of CSE
Topics to be covered	: Source Code Management Using Git & Github
Organizing team	: APSSDC & Department of CSE, GIET (A)
