Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech. (1 Semester)			
Course Code XXXXXX	MATHEMATICS - I (ALL BRANCHES)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisite(s): Types of matrices, Differentiation and Integration.		3	0	0	3

Course Objective:

- This course will illuminate the students in the concepts of calculus and linear algebra.
- To equip the students understand advanced level mathematics to develop the confidence and ability to handle real world problems and their applications.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Transform the knowledge of solving system of linear equations using matrices.
CO2:	Evaluate nature of the Quadratic form.
CO3:	Acquire the knowledge maxima and minima of function of several variables
CO4:	Evaluate multiple integrals and their applications
CO5:	Understand and apply vector derivatives and vector integration theorems.

Syllabus:

Unit I: Matrix Operations and Solving Systems of Linear Equations

10 hrs

Rank of a matrix by echelon form, solving system of linear homogeneous and non-homogeneous equations – Gauss elimination method, Eigen values and Eigen vectors and their properties, Cayley-Hamilton theorem (without proof), finding inverse and power of a matrix by Cayley-Hamilton theorem.

Unit II: Quadratic forms

8 hrs

Quadratic forms and nature of the Quadratic forms, reduction of Quadratic form to canonical form by diagonalisation and orthogonal transformation.

Unit III: Partial differentiation and Applications

10 hrs

Partial derivatives, total derivatives, chain rule, Homogeneous functions and Euler's theorem, change of variables, Jacobians, maxima and minima of functions of two variables, method of Lagrange multipliers.

Unit IV: Multiple Integrals and Applications

10 hrs

Evaluation of double integrals (Cartesian and polar coordinates) and triple integrals, change of variables, change of order of integration, Finding areas and volumes.

UNIT V: Vector Calculus

10 hrs

Scalar and vector point functions, Curl, Gradient and Divergence, directional derivative, Irrotational and Solenoidal vector fields, Line integral, Work done, Area, Surface and volume integrals, Greens, Stokes and Gauss Divergence theorems (without proof).

MATHEMATICS-I

Text books:

1. B. S. Grewal. Higher Engineering Mathematics, 44/e. Khanna Publishers. 2017.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech. I Semester			
Course Code	COMMUNICATIVE ENGLISH-I (Common to all Branches)				
Teaching	Total Contact hours-48	L	T	P	C
Prerequisite(s): Learner should be equipped with basic language and communication skills like Reading, Writing, Listening and Speaking		3	0	0	3

Course Objectives: This course aims to

- Focus on appropriate reading strategies for comprehension of various academic texts and authentic materials.
- Impart effective strategies for good writing, to summarize information and practice writing essays.
- Improve communication in both professional and social life
- Demonstrate Language efficiency in career building
- Provide the knowledge of grammatical structures, vocabulary and encourage their appropriate use in speech and writing.

Course Outcomes:

On Completion of the course, the students will be able to	
CO1:	Develop effective reading strategies
CO2:	Demonstrate writing skills that are required for professional development and use graphic elements for communication
CO3:	Apply grammatical skills and vocabulary effectively in speech and writing
CO4:	Display language efficacy in tune with subjective knowledge
CO 5:	Use required language along with contextual vocabulary and grammar structures

UNIT-I

READING: Detailed Study: Exploration- "A Proposal to Girdle the Earth (Excerpt)" by Nellie Bly, from English All Round: Communication Skills for Under Graduate Learners-I by Orient Black Swan. Non-Detailed Study: "Deliverance" by Prem chand from Individual Society, Pearson Publications **GRAMMAR:** Verbs, nouns, adjectives and adverbs; nouns: countable and uncountable; singular and plural forms. Simple question forms – Wh-questions; Word order in sentences. **VOCABULARY:** Technical Vocabulary (GRE Model)-20 words. Content words and function words; Word forms **WRITING SKILLS:** Paragraph Writing-Beginnings and endings of paragraphs - introducing a topic- structure and types of paragraph.

UNIT-II

READING: Detailed Study: On Campus - An excerpt from "The District School as It Was by One Who Went to It" by Warren Burton from English All Round: Communication Skills for Under Graduate Learners-I by Orient Black Swan Non-Detailed Study: "Bosom Friend" by Hira Bansode from Individual Society, Pearson Publications **GRAMMAR:** Use of articles and zero article; prepositions. **VOCABULARY:** Technical Vocabulary (GRE Model)-20 words. Linkers, sign posts and transition signals. **WRITINGSKILLS:** Punctuation. Summarizing an oral or written text.

UNIT-III

READING: Detailed Study: Working Together - The Future of Work? (Adopted from web resources) From English All Round: Communication Skills for Under Graduate Learners-I by Orient Black Swan. Non-Detailed Study "Shakespeare's Sister" by Virginia Woolf from Individual Society, Pearson Publications **GRAMMAR:** Tense and aspect; direct and indirect speech, reporting verbs for academic purposes. **VOCABULARY:** Technical Vocabulary (GRE Model)-20 words. Prefixes and Suffixes. **WRITING SKILLS:** Rephrasing what is read; avoiding redundancies and repetitions.

UNIT-IV

READING: Detailed Study: Fabric of Change- H. G. Wells and the Uncertainties of Progress by Peter J. Bowler from English All Round: Communication Skills for Under Graduate Learners-1 by Orient Black Swan. Non-Detailed: "Telephone Conversation" by Wole Soyinka from Individual Society, Pearson Publications **GRAMMAR:** Quantifying expressions - adjectives and adverbs; comparing and contrasting; degrees of comparison. **VOCABULARY:** Technical Vocabulary (GRE Model)-20 words. Use of antonyms and homophones. Cloze encounters **WRITING SKILLS:** Information transfer; describe, compare, contrast, and identifying significance/trends based on information provided in figures/charts/graphs/tables – Sensible writing. Defining and classifying.

UNIT – V

READING: Detailed Study: Tools for Life -Leaves from the Mental Portfolio of a Eurasian by Sui Sin Far from English All Round: Communication Skills for Under Graduate Learners-1 by Orient Black Swan. Non-Detailed: "Still I Rise" by Maya Angelou from Individual Society, Pearson Publications. **GRAMMAR:** Reading comprehension- framing right answers and editing the given text. **VOCABULARY:** Technical Vocabulary (GRE Model)-20 words. Idioms and Phrases. **WRITING SKILLS:** Writing structured essays on specific topics using suitable claims and evidences.

Text Books:

1. Detailed Study: ENGLISH ALL ROUND: Communication Skills for Under Graduate Learners- Published by Orient Black swan Pvt Ltd
2. Non-detailed Study: Individual Society, Pearson Publications

Reference books:

1. Pathways: Listening, Speaking and Critical Thinking-1 by Rebecca Tarver Chase, Becky Tarver and Henley, ELT; 2nd Edition, 2018.
2. InfoTech English by Maruthi Publications.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech			
Course Code	APPLIED PHYSICS (For All Circuital Branches like ECE, EEE, CSE, CSE (AI & ML), CSE (Cyber Security) etc)				
Teaching	Total Contact Hours – 48h	L	T	P	C
		3	0	0	3

Course Objective

Physics Curriculum is re-oriented to the needs of all the branches of graduate engineering courses that serve as a transit to understand specific advanced topics.

Course Outcomes:

On Completion of the course, the students will be able	
CO1:	To impart knowledge of physical optical phenomenon like Interference, Diffraction and polarization involving design of optical instruments with higher resolution
CO2:	To demonstrate the concept on the absorption and spontaneous and stimulated emission in two level system and the conditions for laser amplification and explain the working principle of optical fibers and its classification based on refractive index profile and mode of propagation with their applications. To explain the concept of dielectric constant and polarization in dielectric materials and summarize Gauss's law in the presence of dielectrics. and classify the magnetic materials based on susceptibility and their temperature dependence.
CO3:	To study the Schrödinger equation for standard systems with both analytical and numerical methods, and then interpret the results. And to explain the physical states of elementary particles and atoms in different systems based on quantum mechanics
CO4:	To classify the energy bands of semiconductors and outline the properties of n-type and p-type semiconductors

Syllabus:

UNIT –I

WAVE OPTICS

10h

INTERFERENCE: Introduction - Principle of Superposition- Interference in thin films (reflected light) - Newton's Rings – Engineering Applications

DIFFRACTION: Introduction – Types of Diffractions – Fraunhofer Single slit Diffraction (Quantitative) – Double Slit - N slits/Grating (Qualitatively) – Grating Formula – Rayleigh's Criterion - Resolving power of grating

POLARIZATION: Introduction - Types of Polarization (plane, circular, elliptical) – Experimental Production of polarized light by reflection, refraction and double refraction - Nicol's Prism - Half wave and Quarter wave plates

UNIT –II

8h

Laser

Introduction – Characteristics of laser – Spontaneous and Stimulated emissions of radiation – Einstein's coefficients – Pumping schemes – Population inversion – Three level system and meta stable state - Ruby Laser – He-Ne laser - Applications of lasers.

Fiber Optics

Introduction - Principle and structure of Optical Fibers - Acceptance angle - Numerical Aperture - Classification of optical fibers based on Refractive index profile and modes – Applications of the optical fibers

UNIT –III

10h

DIELECTRICS PROPERTIES

Introduction - Electric polarization - Dielectric polarizability, Susceptibility and Dielectric constant- Types of dielectric polarizations – Electronic, Ionic, Orientational & Space (Qualitatively) – Internal Field (or) Local field in solids - Claussius-Mosotti equation – Ferroelectrics (Qualitatively)

MAGNETIC PROPERTIES

Introduction - Magnetic dipole moment-Magnetization-Magnetic susceptibility and permeability- Origin of permanent magnetic moment -Classification of Magnetic materials (Dia, Para, Ferro/Ferri/Antiferro) with regard to temperature and field - Weiss ferromagnetic domain theory (qualitative)-Hysteresis-soft and hard magnetic materials-Ferrites

UNIT –IV

10h

QUANTUM MECHANICS:

Introduction to matter waves – Davison and Germer Experiment - Heisenberg's Uncertainty Principle – Pauli's exclusion principle – Wave Function - Schrodinger Time Independent and Time Dependent wave equations - Particle in a box

FREE ELECTRON THEORY:

Classical free electron theory – Merits and Demerits - Density of states – Fermi Energy - Fermi Distribution Function – Quantum free electron theory – Electrical Conductivity

UNIT –V

10h

Band Theory of Solids:

Introduction - Bloch's theorem (Qualitatively) – Kronig Penny model – Origin of Energy Bands – Effective mass & band gap – Demarcation of band gap for metals, insulators, semiconductors – Concept of Hole

Semiconductor Physics:

Introduction – Density of carriers in Intrinsic and Extrinsic Semiconductors-Drift, Diffusion & Mobility - Einstein's equation – Hall effect

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech. I Sem (1 st Semester)			
Course Code	INTRODUCTION TO ELECTRONICS ENGINEERING				
Teaching	Total Contact Hours -	L	T	P	C
Prerequisites: Basics of electronics		3	-	-	3

- ❖ To understand the efficacy of Electronic principles which are pervasive in engineering applications
- ❖ To familiarize the students of Electronics and Communication Engineering with the fundamental concepts of semiconductor devices, electronic circuits and communication systems

Course Outcomes:

On Completion of the course, students will be able to	
CO1:	To understand the basic knowledge of elements of circuits
CO2:	To understand the knowledge of semiconductor devices and their principle of operation
CO3:	To understand functions of communication system and different modulation technologies, definition of signals and classification of signals and its generation.
CO4:	To understand the working of CRO and its functionality.

UNIT-1

Introduction to Electronics Engineering: Overview, scope and objective of studying Electronics Engineering, Evolution and Impact of Electronics in industries and in society, Familiarization of Resistors, Capacitors, Inductors, Transformers and Electro mechanical components.

UNIT-2

Introduction to semiconductor devices: Band structure of semiconductors, intrinsic and extrinsic semiconductors; Basic principle and operation of semiconductor devices – diode, bipolar junction transistor, field effect transistors

UNIT-3

Fundamentals to signals

Classification of signals, Elementary signals - Continuous Time (CT) signals, Discrete Time (DT) signals, Basic operations on signals

Signal Generators: Types of generators and their operation: The sine wave generator, Audio oscillator, Function generators, Pulse generators, AF signal generator, RF generators

UNIT-4

Introduction to Communication Systems: Elements of a communication system - transmitter and receiver; transmission - basic concepts of amplitude and frequency modulation; Examples of telecommunication systems - telephone, radio, television, mobile communication and satellite communication

UNIT-5

Electronic Dynamics and CRO

Motion of charged particles in electric and magnetic fields. Simple problems involving like Electric and Magnetic field only. Electrostatic and magnetic focusing. Principles of CRT. Deflection sensitivity (Electrostatic and magnetic deflection) Applications of CRO; Voltage current and frequency measurements.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech I Sem.			
Course Code	PROBLEM SOLVING & PROGRAMMING IN C CSE & ECE				
Teaching	Total contact hours-48	L	T	P	C
Prerequisite(s): Basic knowledge of Mathematics, Logical Ability		3	0	0	3

Course Objective(s):

- To provide exposure to problem solving through programming.
- To train the student to the basic concepts of C-programming language.
- The course involves a lab component which is designed to give the student hands-on experience with the concepts.

Course Outcomes:

After successful completion of this course, a student will be able to-

- CO-1: Obtain the knowledge about different languages used in computer programming and basic terminology used in the computer programming.
- CO-2: Write algorithm, flow chart, and structure of C program and make use of different C tokens inside C program.
- CO-3: Develop program by using Control structure, different looping and Jump statement.
- CO-4: Implement applications of Array, Structure and String inside the program. Also acquire the knowledge of different FILE operations.
- CO-5: Obtain knowledge about accessing the memory in the program and also to develop the program by using different types of function calls.

UNIT-1

Introduction to Computer Programming: Computer Languages: Machine level, Assembly level and High-level language.

Introduction to Problem Solving: Algorithm, Pseudo code and Flowchart.

UNIT-2

C Fundamentals: Structure of a C-program, C-character set, C Tokens: variables, constants, identifiers, data types and sizes, operators, Preprocessor.

I/O Functions: Header files, Standard I/O library functions-formatted I/O functions.

Decision making statements: simple if, if-else, nested if-else, else-if ladder, switch-case statements and sample programs.

Iterative Statements: for, while, do-while, Jump Statements-break, continue, goto.

UNIT-3

Introduction to Arrays, Strings

Arrays- Declaration, initialization, storing and accessing elements of 1-D, 2-D and multi-dimensional arrays.

Array Applications: addition, multiplication, transpose, symmetry of a matrix.

Strings: declaration, initialization, reading and writing characters into strings, string operations, character and string manipulation functions.

UNIT-4

Pointers, Functions & Storage Classes

Pointers: Introduction to pointers, defining a pointer variable, Pointer to Pointer, Examples of pointers, using pointers in expressions, pointers and arrays.

Functions: declaration, definition, prototype, function call, return statement, types of functions, parameter passing methods, and function recursion.

Storage Classes: Auto, Static, Extern and Register

UNIT-5

Structures, Unions and Files

Structure and Union: Declaration, initialization, storing and accessing elements by using structure and union.

Files: Definition, Input and output operation into file.

Course Code	APPLIED PHYSICS LABORATORY (For All Circuital Branches like ECE, EEE, CSE, CSE (AI & ML), CSE (Cyber Security) etc)				
Teaching	Total contact hours- 48	L	T	P	C
		0	0	3	1.5

Course Objectives:

On Completion of the course, the students will be able	
CO1:	To handle optical instruments like microscope and spectrometer, determine thickness of a hair/paper with the concept of interference and to estimate the wavelength and resolving power of different colors using diffraction grating
CO2:	To demonstrate the importance of dielectric material in storage of electric field energy in the capacitors and plot the intensity of the magnetic field of circular coil carrying current with varying distance
CO3:	To evaluate the resistivity of the given semiconductor using four probe method
CO4:	To identify the type of semiconductor i.e., n-type or p-type using Hall effect and determine the band gap of a given semiconductor

List of Physics Experiments

1. Determination of the radius of curvature of the lens by Newton's ring method
2. Determination of wavelength by plane diffraction grating method
3. Resolving power of a grating
4. Magnetic field along the axis of a circular coil carrying current
5. To determine the energy gap of a semiconductor
6. Measurement of resistance with varying temperature
7. To determine the V-I characteristics of P-N Junction diode
8. To determine the V-I characteristics Zener diode
9. To determine the resistivity of semiconductor by Four probe method
10. To determine the carrier concentration and Hall coefficient

Additional Experiments

1. Determine the thickness of the fiber using wedge shape method
2. To verify the laws of vibration using sonometer
3. To determine the acceleration due to gravity using compound pendulum
4. Rigidity modulus of material of a wire-dynamic method (torsion pendulum)
5. Moment of inertia by Flywheel

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech I Sem.			
Course Code	PROBLEM SOLVING & PROGRAMMING IN C LAB CSE & ECE				
Teaching	Total contact hours-36	L	T	P	C
Prerequisite(s): Basic knowledge of Mathematics, Logical Ability		0	0	3	1.5

Course Objective(s):

- To provide exposure to problem solving through programming.
- To train the student to the basic concepts of C-programming language.
- The course involves a lab component which is designed to give the student hands-on experience with the concepts.

Course Outcome(s):

After successful completion of this course, a student will be able to-

- CO-1: Obtain the knowledge about different languages used in computer programming and basic terminology used in the computer programming.
- CO-2: Write algorithm, flow chart, and structure of C program and make use of different C tokens inside C program.
- CO-3: Develop program by using Control structure, different looping and Jump statement.
- CO-4: Implement applications of Array, Structure and String inside the program. Also acquire the knowledge of different FILE operations.
- CO-5: Obtain knowledge about accessing the memory in the program and also to develop the program by using different types of function calls.

Programs:

1. Write a C Program to
 - a) Calculate the area of triangle using the formula

$$\text{Area} = (s(s-a)(s-b)(s-c))^{1/2}, \text{ where } s = (a+b+c)/2$$
 - b) To find the largest of three numbers using ternary operator.
 - c) To swap two numbers without using a temporary variable.
2. Write a C program that perform the following operations:
 - a) Reading and writing a complex number
 - b) Addition of two complex numbers
3. Write a C program to
 - a) 2's complement of a number is obtained by scanning it from right to left and complementing all the bits after the first appearance of a 1. Thus 2's complement of 11100 is 00100. Write a C program to find the 2's complement of a binary number.
 - b) Find the roots of a quadratic equation
 - c) Take two integer operands and one operator from the user. Performs the operation and then prints the result (Consider the operators +, -, *, / and use Switch Statement)

4. Write a C Program to print the following patterns
 - a) Floyd's triangle
 - b) Pyramid
 - c) Pascal Triangle
5. Write a C program to
 - a) Check whether the given number is Armstrong number or not.
 - b) Check whether the given number is palindrome or not.
 - c) Find the sum of individual digits of a positive integer and find the reverse of the given number.
 - d) A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.
 - e) Generate all the prime numbers between 1 and n, where n is a value supplied by the user.
6. Write a C Program to
 - a) Print the multiplication table of a given number n up to a given value, where n is entered by the user.
 - b) Enter a decimal number, and calculate and display the binary equivalent of that number.
 - c) Enter a binary number, and calculate the decimal equivalent of that number.
7. Write a C program to
 - a) Interchange the largest and smallest numbers in the array.
 - b) Implement a linear search.
 - c) Implement binary search.
8. Write a C program to
 - a) Examples which explore the use of structures, union and other user defined variables.
 - b) Declare a structure for calculating the percentage achieved by 3 students, by considering the structure elements as name, pin no, mark1, mark2, mark3.
9. Write C Programs
 - a) For the following string operations without using the built in functions to
 - i. length of a string
 - ii. reverse a string
 - iii. append a string to another string
 - iv. compare two strings
 - b) Write a C Programs to check whether the given string "MADAM" is palindrome or not without using the built in functions.
10. Write a C program
 - a) Use functions to perform the following operations:
 - i. To insert a sub-string in to given main string from a given position.
 - ii. To delete n Characters from a given position in a given string.
 - b) To replace a character of string either from beginning

11. Write a C Programs for the following string operations with and without using the built in functions
 - a) To reverse a string using pointers.
 - b) To concatenate two strings by using pointer.
12. Write a C programs that use both recursive and non-recursive functions for the following
 - a. To find the factorial of a given integer.
 - b. To find the GCD of two given integers.
 - c. To find Fibonacci sequence.
13. Write C programs to
 - a) Find the area of triangle by using call by value and call by reference concepts.
 - b) Pointer based function to exchange value of two integers using passing by address.
14. Write C programs to
 - a) Read and display the data from a file.
 - b) Copy the data from one file to another file.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech I SEM			
CourseCode	ENVIRONMENTAL SCIENCE (Common to All Branches)				
Teaching	Totalcontacthours-32h	L	T	P	C
Prerequisite(s): Knowledge of Environment Science		2	0	0	0

Course Objective: To bring in the students an awareness on environment, to understand the importance of protecting natural resources, ecosystems for future generations and study the causes for pollution due to the day-to-day activities of human life, to save earth from the interventions by the engineers.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Gain a higher level of personal involvement and interest in understanding and solving environmental problems.
CO2:	Comprehend environmental problems from multiple perspectives with emphasis on human modern lifestyles and developmental activities
CO3:	Demonstrate knowledge relating to the biological systems involved in the major global environmental problems of the 21st century
CO4:	Recognize the interconnectedness of human dependence on the earth's ecosystems
CO5:	Influence their society in proper utilization of goods and services.

Syllabus:

UNIT – I

MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES

Definition, Scope and Importance – Need for Public Awareness.

NATURAL RESOURCES : Renewable and non-renewable Energy resources – Natural resources and associated problems – Forest resources – Use and over – exploitation, deforestation, case studies – Timber extraction – Mining, dams and other effects on forest and tribal people – Water resources – Use and over utilization of surface and ground water – Floods, drought, conflicts over water, dams – benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity.

UNIT – II

ECOSYSTEMS, BIODIVERSITY, AND ITS CONSERVATION

Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Ecological succession – Food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the following ecosystem:

- Forest ecosystem.
- Grassland ecosystem
- Desert ecosystem
- Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

BIODIVERSITY AND ITS CONSERVATION: Definition: genetic, species and ecosystem diversity – Value of biodiversity: consumptive use, Productive use, social, ethical, aesthetic and option values – Biodiversity at global, National and local levels – India as a mega-diversity nation – Hot-spots of biodiversity – Threats to biodiversity: habitat loss, poaching of wildlife,

man-wildlife conflicts – Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

UNIT – III

ENVIRONMENTAL POLLUTION AND SOLID WASTE MANAGEMENT

Definition, Cause, effects and control measures of: Air Pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards

SOLID WASTE MANAGEMENT: Causes, effects and control measures of urban and industrial wastes – Role of an individual in prevention of pollution – Pollution case studies – Disaster management: floods, earthquake, cyclone and landslides.

UNIT – IV

SOCIAL ISSUES AND THE ENVIRONMENT

Urban problems – Water conservation, rain water harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns. Case studies – Environmental ethics: Issues and possible solutions – Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case Studies – Wasteland reclamation. – Consumerism and waste products. – Environment Protection Act. – Air (Prevention and Control of Pollution) Act. – Water (Prevention and control of Pollution) Act – Wildlife Protection Act – Forest Conservation Act – Issues involved in enforcement of environmental legislation – Public awareness.

UNIT – V

HUMAN POPULATION AND THE ENVIRONMENT

Population growth, variation among nations. Population explosion – Family Welfare Programmed. – Environment and human health – Value Education – HIV/AIDS – Women and Child Welfare – Role of information Technology in Environment and human health.

FIELD WORK: Visit to a local area to document environmental assets River/forest grassland/hill/mountain – Visit to a local polluted site-Urban/Rural/Industrial/Agricultural Study of common plants, insects, and birds – river, hill slopes, etc.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech. (II Semester)			
Course Code XXXXXXX	MATHEMATICS - II (ALL BRANCHES)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisite(s): Fundamentals of differentiation and interation.		3	0	0	3

Course Objective:

- To enlighten the learners in the concept of differential equations and multivariable calculus.
- To furnish the learners with basic concepts and techniques at plus two level to lead them into advanced level by handling various real world applications

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Solve first order differential equations.
CO2:	Solve higher order differential equations with constant coefficients.
CO3:	Apply the knowledge of approximating and find the roots of polynomial and transcendental equation in practical engineering problems.
CO4:	Understand numerical differentiation and integration.
CO5:	Apply the Knowledge of different algorithms for approximating the solution of ordinary differential equations in practical Engineering problems.

Syllabus:

UNIT I: Mean value theorems, First Order differential equations & Applications 10 hrs

Rolle's theorem, Lagrange's mean value theorem, Cauchy mean value theorem.
Formation of differential equation, Solutions of Exact and Reducible to exact, Linear and Bernoulli differential equations. Applications: Newton's law of cooling, Law of natural growth and decay, Orthogonal trajectories.

UNIT II: Higher Order Differential Equations and Applications 10 hrs

Solutions of higher order differential equations with constant coefficients. Solutions of Non-homogeneous equations of higher order with constant coefficients with RHS term of the form e^{ax} , $\sin ax$, $\cos ax$, Polynomials in x , $e^{ax}V(x)$, $xV(x)$. Method of variation of parameters. Applications: Mass spring system and L-C-R Circuit problems.

Unit III: Solutions of Algebraic, Transcendental Equations and Interpolation 8 hrs

Introduction, Bisection method, Regula-Falsi method and Newton-Raphson method.
Interpolation: Newton's Forward and backward formulae, Lagrange's interpolation.

UNIT IV: Numerical Differentiation and Integration 10 hrs

Numerical differentiation: Forward and backward difference formulae. Numerical integration: Trapezoidal rule and Simpson's 1/3rd and 3/8 rule.

UNIT V: Numerical Solution of Ordinary Differential Equations 10 hrs

Solutions of ordinary differential equations- Taylor's series, Euler method, Modified Euler method, Runge-Kutta method (Second and fourth order) for first initial value problems.

MATHEMATICS – II

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech II SEM			
Course Code	ENGINEERING CHEMISTRY (Common to All Branches)				
Teaching	Total contact hours-48h	L	T	P	C
Prerequisite(s): Knowledge of theoretical and experimental concepts from Intermediate level, Application of Chemistry theory and calculations required for the course.		3	0	0	3

Course Objective:

To acquaint the students with soft and hard water types and softening methods, to introduce the basic concepts of electrochemical cells and photovoltaic cells and to familiarize the students with engineering materials, their properties and applications.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1	Understand the removal techniques of hardness of water
CO2	Distinguish the fuel cells and batteries
CO3	Identify different control techniques of corrosion
CO4	Understand the concepts of plastics and rubbers
CO5	Analyze the importance of nano materials

Syllabus

UNIT –I

WATER TECHNOLOGY

Hardness of water, Determination of hardness by EDTA Method - Boiler troubles - scale and sludge-priming and foaming (reasons and its preventions), specifications for drinking water by World Health Organization (WHO) standards, municipal water treatment or portable water treatment, softening of water - Lime soda process, zeolite and ion-exchange processes, Desalination of brackish water, reverse osmosis (RO) and electro dialysis.

UNIT – II

ENERGY SOURCES AND APPLICATIONS

Electrode potential, determination of single electrode potential –Nernst's equation, reference electrodes, hydrogen and calomel electrodes – electrochemical series and its applications – primary cell, dry or Leclanche cell – secondary cell, lead acid storage cell, nickel-cadmium cell – lithium ion batteries (Lithium-MnO₂) – fuel cell, hydrogen-oxygen fuel cell, Solar cell and its applications.

UNIT – III

CORROSION ENGINEERING

Corrosion: Definition – theories of corrosion, chemical and electro chemical corrosion – pitting corrosion, differential aeration corrosion, passivity, factors affecting corrosion – nature of the metal and nature of the environment.

Corrosion Controlling Methods: Sacrificial and Impressed current cathodic protection, Metallic coatings (anodic, cathodic), applying of metallic coatings - galvanizing and tinning, metal cladding, electroplating, organic surface coatings, paints (constituents and their functions).

UNIT – IV

POLYMERS

Introduction to polymers and monomers, polymerization and its types, mechanism of addition polymerization, compounding and fabrication of plastics, differences between thermoplastic and thermo setting resins, Preparation, properties and uses of Urea-Formaldehyde, PVC and polyethylene, Natural Rubber-vulcanization of rubber, Preparation, properties and uses of BUNA-S and BUNA-N Rubber, conducting polymers and its applications.

UNIT – V

NANO MATERIALS

Introduction to Nano materials, Nano structured materials-nano rods, nano sheets, Quantum dots, Methods of preparations by bottom up and top-down approaches -ball milling, sol-gel methods, Characterization of nanoparticles by XRD, SEM and TEM (includes basic principle of TEM), Applications of nanomaterials.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech. II Sem (2 nd Semester)			
Course Code	Engineering Graphics (Common to EEE, ECE and CSE)				
Teaching	Total contact hours- 60	L	T	P	C
Prerequisite(s): Aptitude to Learn and Basic Geometry		1	0	0	2.5

Course Objectives:

- To highlight the significance of universal language of engineers.
- To impart basic knowledge and skills required to prepare engineering drawings.
- To impart knowledge and skills required to draw projections of solids in different contexts.
- To visualize and represent the pictorial views with proper dimensioning and scaling. Course

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Apply principles of drawing to represent dimensions of an object.
CO2:	Outline the polygons and engineering curves.
CO3:	Illustrate projections of points, lines, planes and solids.
CO4:	Illustrate the 3D views through isometric views.
CO5:	Create the isometric views and orthographic views

Syllabus:

UNIT-I

POLYGONS: Constructing regular polygons by general methods, inscribing and describing polygons on circles.

CURVES: Parabola, Ellipse and Hyperbola by general methods, cycloids, involutes.

UNIT-II

ORTHOGRAPHIC PROJECTIONS: Horizontal plane, vertical plane, profile plane, importance of reference lines, projections of points in various quadrants, projections of lines, lines parallel either to one of the reference planes (HP, VP or PP)

PROJECTIONS OF STRAIGHT LINES: Inclined to both the planes, determination of true lengths, angle of inclination and traces- HT, VT.

UNIT-III

PROJECTIONS OF PLANES: Regular planes perpendicular/parallel to one plane and inclined to the other reference plane: inclined to both the reference planes.

UNIT-IV

PROJECTIONS OF SOLIDS: Prisms, Pyramids, Cones and Cylinders with the axis inclined to one of the planes.

UNIT-V

ISOMETRIC VIEWS: Conversion of isometric views to orthographic views: Conversion of orthographic views to isometric views.

COMPUTER AIDED DESIGN: Drawing practice using Auto CAD. Creating 2D&3D drawings of objects using Auto CAD

Note: In the End Examination there will be no question from CAD.

Text Books:

1. Engineering Drawing by N.D. Butt, Chariot Publications.
2. Engineering Drawing by Agarwal & Agarwal, Tata McGraw Hill Publishers.

Reference Books:

1. Engineering Drawing by K.L.Narayana & P. Kannaiah, Scitech Publishers.
2. Engineering Graphics for Degree by K.C. John, PHI Publishers.
3. Engineering Graphics by P.I Varghese, McGrawHill Publishers.
4. Engineering Drawing + AutoCad – K.Venugopal, V. Prabhu Raja, New Age.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech II SEM.			
CourseCode	DATA STRUCTURES USING C				
Teaching	Total contact hours-48	L	T	P	C
Prerequisite(s): Basic knowledge of Mathematics and C Language		1	0	4	3

Course Objective(s):

- Be familiar with basic techniques of algorithm analysis.
- Be familiar with writing recursive methods
- Be familiar with several sub-quadratic sorting algorithms including quick sort and merge sort
- Master the implementation of data structures such as stacks and queues.
- Master the implementation of linked data structures such as linked lists, graphs and binary trees
- Comprehensive knowledge of data structures and ability to implement the same in software applications

Course Outcome(s):

After successful completion of this course, a student will be able to-

- CO-1:** To be able to choose appropriate data structure as applied to specified problem definition.
- CO-2:** To be able to handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
- CO-3:** To be able to apply concepts learned in various domains like DBMS, compiler construction.
- CO-4:** To be able to use linear and non-linear data structures like stacks, queues, linked list etc.

UNIT-1

Data structure- Definition, types of data structures

Recursion: Definition, Design Methodology and Implementation of recursive algorithms, Linear and binary recursion, recursive algorithms for factorial function, GCD computation, Fibonacci sequence.

Preliminaries of algorithm, Algorithm analysis and complexity.

Searching Techniques: Linear Search, Binary Search and Fibonacci Search.

Sorting Techniques: Insertion sort, selection sort, exchange-bubble sort, quick sort and merge sort Algorithms.

UNIT-2

Stacks: Basic Stack Operations, Representation of a Stack using Arrays,

Applications of Stack: Reversing list, Factorial Calculation, Infix to postfix Transformation, Evaluating Arithmetic Expressions.

UNIT-3

Queues: Basic Queues Operations, Representation of a Queue using array, Implementation of Queue Operations using Stack.

Applications of Queues: Circular Queues, De-queue, Priority Queues.

UNIT-4

Linked Lists: Introduction, single linked list, representation of a linked list in memory, Operations on a single linked list, reversing a single linked list, Circular linked list and Double linked list.

UNIT-5

Trees-Binary Trees, terminology, representation and traversals-pre, post & in order traversals.

Graphs- terminology, representation and traversals (BFS&DFS).

Text Books

1. Data Structures with C, Seymour Lipschutz, Schaum's Outlines, TMH-special 2nd Edition
2. Data structures using C, 2nd Edition, Reema Thareja, Oxford higher education.

Reference Books

1. Data structures: A Pseudo code Approach with C, 2nd edition, R.F. Gilberg and B.A. Forouzan, Cengage Learning
2. Data structures A Programming Approach with C, D.S. Kushwaha and A.K. Misra, PHI.
3. Data structures and Algorithm Analysis in C, 2nd edition, M.A. Weiss, Pearson.
4. Data Structures using C, A.M. Tanenbaum, Y. Langsam, M.J. Augenstein, Pearson.

Course Code	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING (Common for Mech, CE, AME, PET, MM, ECE, EEE)				
Teaching	Total contact hours-45	L	T	P	C
Prerequisite(s): Basics of Physics		3	0	0	3

Course Objective:

1. To learn the basic principles of electrical law's and analysis of networks.
2. To understand the principle of operation and construction details of DC machines.
3. To learn the principle of operation and constructional details of transformers, alternator and induction motors.
4. To study the operation of PN junction diode, half wave, full Wave rectifiers and OP-AMPS
5. To study operation of PNP and NPN transistors and various amplifiers.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Analyze the various electrical networks
CO2:	Understand the operation of DC machines, 3-point starter and conduct the Swinburne's Test.
CO3:	Analyze the performance of transformer, operation of 3-phase alternator and 3-phase induction motors.
CO4:	Analyze the operation of half Wave, full wave rectifiers, op-amps.
CO5:	Explain the single stage CE amplifier and concept of feedback amplifier.

Syllabus:

UNIT –I Introduction to Electrical Circuits

Basic definitions, Electrical circuit elements (R, L and C), Ohm's Law, Series & Parallel circuits, Kirchhoff's Laws, Simple problems.

UNIT- II DC Generator

Generator-Principle of Operation, Construction, EMF equation, Classification, O.C.C, internal and external characteristics of shunt generator, Applications.

UNIT- III DC Motor

Motor-principle of operation, Torque equation, Classification Speed Control Methods, Operation of 3 point starter, Applications.

UNIT –IV Rectifiers & Linear Integrated Circuits

PN junction diodes, diode applications - Half wave and bridge rectifiers. Characteristics of operation amplifiers (OP-AMP) - application of OP-AMPS (inverting, non-inverting, integrator and differentiator).

UNIT –V Transistors

PNP and NPN junction transistor, transistor as an amplifier, single stage CE amplifier, frequency response of CE amplifier, concepts of feedback amplifier.

Regulation GRBT-20	Godavari Institute of Engineering and Technology (Autonomous)	I B.Tech II SEM			
CourseCode	ENGINEERING CHEMISTRY LABORATORY (Common to All Branches)				
Teaching	Total contact hours - 45	L	T	P	C
Prerequisite(s): Applications	Basic knowledge of Engineering Chemistry	0	0	3	1.5

COURSE OBJECTIVES

To familiarize the students with the basic concepts of Engineering Chemistry Lab, training the students on how to handle the instruments and to demonstrate the digital and instrumental methods of analysis.

COURSE OUTCOMES

On Completion of the course, the students will be able to-	
CO1:	Explain the functioning of the instruments such as pH, Conductivity and Potentiometric meters
CO2:	Determine the total hardness of water
CO3:	Perform various Redox titrations
CO4:	Preparation of polymers
CO5:	Compare viscosities of different oils

LIST OF EXPERIMENTS

1. Determination of strength of an acid by pH metric method
2. Determination of Fe (II) in Mohr's salt by potentiometric method
3. Determination of conductance by conductometric method
4. Determination of Hardness of a ground water sample
5. Determination of chromium (VI) in potassium dichromate
6. Determination of strength of KMnO_4 using standard Oxalic acid solution
7. Determination of Zinc by EDTA method
8. Preparation of Urea-Formaldehyde resin
9. Estimation of active chlorine content in Bleaching powder
10. Estimation of sodium hydroxide with HCl

Demonstration Experiments

1. Determination of viscosity of a liquid
2. Determination of surface tension of a liquid

3. Estimation of vitamin-C

Course Code	COMMUNICATIVE ENGLISH LAB				
Teaching hours	Total Contact hours-48	L	T	P	C
Prerequisite(s) Learner should be equipped with Basic Language and Communication Skills like, Listening and Speaking which ensure Good Pronunciation and Ease in Communication		0	0	3	1.5

Course Objectives: This course aims to

- Adopt activity-based teaching-learning methods to ensure effective learning both in the classroom and laboratory sessions.
- Facilitate effective listening skills for better comprehension of academic lectures and English spoken by native speakers
- Improve speaking skills through participation in activities such as role plays, discussions and structured talks/oral presentations
- Explore the important language needs of the learner
- Build Language efficacy in both speaking and listening context

Course Outcomes: On Completion of the course, the students will be able to

CO1:	Learn to communicate in English
CO2:	Comprehend native speaker's accent.
CO3:	Speak appropriately in real life situations
CO4:	Display public speaking skills in the required context
CO5:	Handle different communicative situations

UNIT 1: BASIC AURAL AND ORAL SKILLS

Listening: Identifying the topic, the context and specific pieces of information by listening to short audio texts and answering a series of questions. Asking and answering general questions on familiar topics such as home, family, work, studies and interests; introducing oneself and other. **Speaking:** Phonetics-Accent and pronunciation

UNIT 2: CONVERSATIONAL SKILLS

Listening: Listening to audio texts, framing question in order to find out the gist of the unknown text. **Speaking:** Discussion in pairs/ small groups on specific topics followed by short structured talks

UNIT 3: LANGUAGE IN USE

Listening: Listening for global comprehension and summarizing. **Speaking:** Asking for Clarifications, Inviting others, Expressing Sympathy, Congratulating, Apologizing, Advising, Suggesting, Agreeing and Disagreeing.

UNIT 4: LANGUAGE APPLICATION

Listening: Making predictions while listening to conversations/ transactional dialogues; listening to video and narrating the theme. **Speaking:** word stress-di-syllabic words, Poly-Syllabic words -Role plays for practice of conversational English in academic contexts (formal and informal) - asking for and giving information/directions.

UNIT 5: INTERPRETATIONS

Listening: TED Talks – understanding the summary. **Speaking:** Formal oral presentations on topics from academic contexts and technical background. Giving formal explanations.

Lab Manual: INTERACT by Orient Black Swan

SOFTWARE: Cambridge –UNLOCK-2, English In Mind, Pronunciation Power, English grammar in Use

Reference Books:

1. English Pronunciation in use- Mark Hancock, Cambridge University Press
2. English Phonetics and Phonology-Peter Roach, Cambridge University Press.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	I B.Tech			
Course Code	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY (Common for Mech, CE, AME, PET, MM, ECE, EEE)				
Teaching	Total contact hours - 30	L	T	P	C
Prerequisite(s): Basics of Physics		0	0	3	1.5

Course Objectives:

1. To verify the Kirchhoff's laws & Ohm's law
2. To calculate the efficiencies of transformers, DC motors, Three-phase Induction Motor
3. To plot the characteristics of PN junction diode & operational amplifier
4. To plot the characteristics of Transistor

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Analyze the various electrical networks
C02:	Understand the operation of DC machines, 3-point starter and conduct the Swinburne's Test.
C03:	Analyze the performance of transformer, operation of 3-phase alternator and 3-phase induction motors.
C04:	Analyze the operation of half Wave, full wave rectifiers, op-amps.
C05:	Explain the single stage CE amplifier and concept of feedback amplifier.

List of Experiments:

1. Verification of Kirchhoff's laws
2. Verification of Ohm's laws
3. Study of various wiring components (wires, switches, fuses, sockets, plugs, Lamp holders, lamps etc. their uses and ratings)
4. Measurement of current, voltage, power in R-L-C series circuit excited by single phase supply
5. Verification of voltage & current relations in Star & delta connections
6. Swinburne's test on a DC shunt machine.
7. Transistor common base characteristics
8. Speed control of D.C. Shunt motor by Armature Voltage control and Field flux control method
9. Efficiency and regulation of a single phase transformer by direct loading method.
10. Brake test on a three phase induction motor
11. PN junction Diode characteristics a). Forward bias b).Reverse bias. (Cut in voltage & Resistance calculations)
12. Zener diode characteristics
13. Half wave rectifier
14. Full wave Rectifier
15. Transistor common emitter characteristics.

Regulation GRBT-20	GODAVARI INSTITUTE OF ENGINEERING & TECHNOLOGY (Autonomous)				
Course Code	PROGRAMMING WITH PYTHON Common to ME, ECE, MINING, PETROLEUM & AME				
Practice	Total contact hours: 48	L	T	P	C
Prerequisite(s): Knowledge of any programming language		0	1	2	2

Course Objective(s):

- This course is intended to teach adequate knowledge on different data structures technique.
- To develop solutions for problems demonstrating usage of control structures, modularity, I/O and other standard language constructs.

Course Outcome(s):

After successful completion of this course, a student will be able to-

CO-1: To learn and understand Python programming basics and paradigm

CO-2: Handle different data structures.

CO-3: Understand the use of control statements, function overloading, operator overloading in real time application

CO-4: Implement files using various file operations.

CO-5: Apply knowledge to handle exception handling and database connectivity

List of Programs:

1. Write a program that asks the user for a weight in kilograms and converts it to pounds. There are 2.2 pounds in a kilogram.
2. Write a program that asks the user to enter three numbers (use three separate input statements). Create variables called total and average that hold the sum and average of the three numbers and print out the values of total and average.
3. Write a program that uses a for loop to print the numbers 8, 11, 14, 17, 20, . . . , 83, 86, 89.
4. Write a program that asks the user for their name and how many times to print it. The program should print the user's name, the specified number of times.
5. Use a for loop to print a triangle like the one below. Allow the user to specify how high the triangle should be.

```

      *
      **
      ***
      ****
      
```
6. Write a program that asks the user to enter a word and prints out whether that word contains any vowels.
7. Write a program that asks the user to enter two strings of the same length. The program should then check to see if the strings are of the same length. If they are not, the program should print an appropriate message and exit. If they are of the same length, the program should alternate the characters of the two strings. For example, if the user enters abcde and ABCDE the program should print out AaBbCcDdEe.

8. Write a program that generates a list of 20 random numbers between 1 and 100 and perform the following.
 - (a) Print the list.
 - (b) Print the average of the elements in the list.
 - (c) Print the largest and smallest values in the list.
 - (d) Print the second largest and second smallest entries in the list
 - (e) Print how many even numbers are in the list.
9. Write a program that asks the user for an integer and creates a list that consists of the factors of that integer.
10. Write a program that removes any repeated items from a list so that each item appears at most once. For instance, the list [1,1,2,3,4,3,0,0] would become [1,2,3,4,0].
11. Write a program that asks the user to enter a length in feet. The program should then give the user the option to convert from feet into inches, yards, miles, millimeters, centimeters, meters, or kilometers. Say if the user enters a 1, then the program converts to inches, if they enter a 2, then the program converts to yards, etc. While this can be done with if statements, it is much shorter with lists and it is also easier to add new conversions if you use lists.
12. Write a function called sum_digits that is given an integer num and returns the sum of the digits of num.
13. Write a function called number_of_factors that takes an integer and returns how many factors the number has.
14. Write a function called is_sorted that is given a list and returns True if the list is sorted and False otherwise.
15. Write a function called primes that is given a number n and returns a list of the first n primes. Let the default value of n be 100.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. I Sem (3 semester)			
Course Code	ELECTRONIC DEVICES AND CIRCUITS				
Teaching	Total contact hours-60	L	T	P	C
Prerequisite(s): Knowledge of engineering physics related to semiconductors		3	1	-	3

Course Objective:

1. To introduce components such as diodes, BJTs and FETs
2. To know the applications of components.
3. To know the switching characteristics of components
4. To give understanding of various types of amplifier circuits.
5. To learn the basics of small signal amplifier models using h-parameters

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Understand the characteristics of various electronic components.
CO2:	Know the construction, working principle of rectifiers with and without filters
CO3:	Understand the utilization of components.
CO4:	Understand the biasing techniques
CO5:	Gain knowledge of small signal low frequency transistor amplifier models

Syllabus:

UNIT-I: REVIEW OF SEMICONDUCTOR PHYSICS

Hall effect, continuity equation, law of junction, Fermi Dirac function, Fermi level in intrinsic and extrinsic Semiconductors

JUNCTION DIODE CHARACTERISTICS

Energy band diagram of PN junction Diode, Open circuited p-n junction, Biased p-n junction, p-n junction diode, current components in PN junction Diode, V- I Characteristics ,temperature dependence on V-I characteristics.

UNIT-II: DIODES AND APPLICATIONS

Diode – Diode Equation, Diode Resistance and Capacitance, Diode Applications.

Rectifiers - Half Wave Rectifier, Full Wave Rectifier, Bridge Rectifier, Rectifiers with Capacitive and Inductive Filters, Clippers-Clipping at two independent levels, Clamper-Clamping Circuit Theorem, Clamping Operation, Types of Clampers.

UNIT-III: BIPOLAR JUNCTION TRANSISTOR

Principle of Operation, Common Emitter, Common Base and Common Collector Configurations and their Characteristics, Transistor as a switch, Ebers-Moll model of a transistor, Transistor Biasing and Stabilization - Operating point, DC & AC load lines, Biasing - Fixed Bias, Self Bias, Voltage Divider Bias, Stability, Stability factors, (S, S', S'') and Compensation Techniques.

UNIT- IV: JUNCTION FIELD EFFECT TRANSISTOR & SPECIAL PURPOSE DEVICES

Construction, Principle of Operation, Pinch-Off Voltage, Volt-Ampere Characteristic, Comparison of BJT and FET, Biasing of FET.

SPECIAL PURPOSE DEVICES: Zener Diode - Characteristics, Voltage Regulator. Principle of Operation - SCR, Tunnel diode, UJT, Varactor Diode, LED, Photo Diode.

UNIT-V: SMALL SIGNAL LOW FREQUENCY TRANSISTOR AMPLIFIER MODELS

BJT: Transistor Hybrid model, Determination of h-parameters from transistor characteristics, Typical values of h- parameters in CE, CB and CC configurations, Transistor amplifying action, Analysis of CB, CE and CC amplifiers using exact and approximate analysis, low frequency response of BJT Amplifiers, effect of coupling and bypass capacitors in CE Amplifier.

FET: Small Signal Model, Analysis of JFET Amplifiers, Analysis of CS, CD, CG JFET Amplifiers. MOSFET Characteristics in Enhancement and Depletion mode

Text Books:

Regulation	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. I Sem			
Course Code	NETWORK ANALYSIS	(3rd semester)			
Teaching	Total contact hours – 50	L	T	P	C
Prerequisites: Knowledge of Engineering Physics and Basic electronic engineering.		3	1	-	3

Course Objectives:

1. Familiarize with the fundamentals of electrical circuits and basic electrical laws.
2. Familiarize with various analysis techniques for AC circuits.
3. Understand different types of theorems
4. Understand the concept of two port network and their relations.
5. Study the concept of transient and steady state analysis.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Analyze the basic concepts of circuits and different models of laws
CO2:	Apply the outputs of different elements in complex RLC circuits and get the response
CO3:	Apply the rules of different dot notation and solve the coupled network output, understand the concept of resonance and hence design the circuits under resonance.
CO4:	Understand and apply the different theorems in circuits, evaluating the values of two-port networks parameters by the basic concepts of two-port networks.
CO5:	Understand the concept of transient circuits and apply the concept for problem solving

Syllabus:

UNIT-I BASIC CIRCUIT FUNDAMENTALS

Network elements classification, Energy sources - Independent and dependent sources, Source transformation, Kirchhoff's laws, Mesh analysis and Nodal analysis .

AC Fundamentals : Definitions of terms associated with periodic functions: Time period, Angular velocity and frequency, RMS value, Average value, Form factor and peak factor-numerical problems, Phase angle, Phasor representation, Addition and subtraction of phasor, mathematical representation of sinusoidal quantities, explanation with relevant theory, numerical problems. Principal of Duality with examples.

Network Topology: Definitions of branch, node, tree, planar, non-planar graph, incidence matrix, basic tie set schedule, basic cut set schedule.

UNIT- II STEADY STATE ANALYSIS OF AC CIRCUITS

Response to sinusoidal excitation - Impedance concept, series R,L,C circuits numerical problems. Complex impedance and phasor notation for R,L,C, Star-Delta conversion, numerical problems. Resonance: Introduction, Definition of Q, Series resonance, Bandwidth of series resonance, Parallel resonance, Condition for maximum impedance, current in anti resonance, Bandwidth of parallel resonance, anti resonance at all frequencies.

Coupled Circuits : Coupled Circuits: Self inductance, Mutual inductance, Coefficient of coupling, analysis of coupled circuits, Natural current, Dot rule of coupled circuits, Conductively coupled equivalent circuits- problem solving.

UNIT-III NETWORK THEOREMS and RESONANCE

Thevenin's, Norton's, Superposition, Millman's, Reciprocity, Compensation, Substitution, Max Power Transfer, Tellegen's- dependent and independent sources- both with DC & AC excitation. **Resonance:** Introduction, Definition of Q, Series resonance, Bandwidth of series resonance, Parallel resonance, Condition for maximum impedance, current in anti resonance, Bandwidth of parallel resonance, general case-resistance present in both branches

UNIT- IV TWO-PORT NETWORKS

Z-parameters, Y-parameters, h-parameters ,Relationship between parameter sets, Parallel connection of two port networks, Cascading of two port networks, series connection of two port networks

UNIT- V TRANSIENTS

First order differential equations, Definition of time constants, R-L circuit, R-C circuit with DC excitation, Evaluating initial conditions procedure, second order differential equations, homogeneous, non-homogenous, problem solving using R-L-C elements with DC excitation and AC excitation,

Regulation	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. I Sem (3 semester)			
GRBT-20 Course Code	SWITCHING THEORY AND LOGIC DESIGN				
Teaching	Total contact hours-60	L	T	P	C
Prerequisite(s): Set theory and number system		3	1	-	3

Course Objective:

1. To learn basic techniques of various number system to understand the switching systems.
2. To understand common forms of number representation in digital electronic Circuits
3. To design combinational logic circuits, sequential logic circuits
4. To impart to student the concepts of sequential circuits, enabling them to analyse Sequential systems in terms of state machines
5. To implement synchronous state machines using flip-flops.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Understand number systems, binary addition and subtraction, 2's complement representation and operations and understand the different binary codes
CO2:	Explain switching algebra theorems and apply them for logic functions
CO3:	Evaluate functions using various types of minimizing algorithms like Boolean algebra, Karnaugh map and Tabulation method.
CO4:	Analyse the design procedures of Combinational logic circuits
CO5:	Analyse the design procedures of sequential logic circuits

State diagram and state equation and Conversion of flip-flops. Design of asynchronous and synchronous counters, Johnson and ring counters, Shift register

Unit-V Sequential circuits-II

Introduction to state machines, State diagrams, State tables and state equations, Finite statemachines: Analysis of clocked sequential circuits, Reduction of state tables, state diagrams and state assignments, Design procedure, Mealy and Moore models, Mealy to Moore conversion and vice-versa

Text books:

1. Digital Design, M. Morris Mano, Prentice Hall; 3 edition (August 1, 2001).

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. I Sem (3 semester)			
Course Code	SIGNALS AND SYSTEMS				
Teaching	Total contact hours-60	L	T	P	C
Prerequisite(s): Knowledge of Mathematics-I.		3	1	-	3

Course Objective:

1. To study about signals and systems and its properties.
2. To analyze the spectral characteristics of signals using Fourier series and Fourier transforms.
3. To understand the Concepts of convolution and correlation with respect to LTI systems.
4. To know various transform techniques to analyze the signals and systems.
5. To introduce the concept of sampling process.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Differentiate the various classifications of signals and systems.
CO2:	Analyze the frequency domain representation of signals using Fourier concepts.
CO3:	Analyze the Convolution and Correlation with respect to LTI systems.
CO4:	Apply z-transforms to analyze signals and Systems.
CO5:	Know the sampling process and various types of sampling techniques

Syllabus:

Unit- I INTRODUCTION TO SIGNALS AND SYSTEMS:

Definition of Signals and Systems, Classification of Signals, Classification of Systems, Operations on signals: time-shifting, time-scaling, amplitude-shifting, amplitude-scaling.

Problems on classification and characteristics of Signals and Systems. Complex exponential and sinusoidal signals, Singularity functions and related functions: impulse function, step function, signum function and ramp function. Analogy between vectors and signals, orthogonal signal space, Signal approximation using orthogonal functions, Mean square error, closed or complete set of orthogonal functions, Orthogonality in complex functions. Related problems.

Unit-II FOURIER SERIES AND FOURIER TRANSFORM:

Representation of Fourier series in both Trigonometric and Exponential forms and its relationship, Deriving Fourier transform from Fourier series, Fourier transform of standard, Fourier transform of arbitrary and Fourier transform of periodic signals, Magnitude and Phase response, properties of Fourier transforms.

Unit-III ANALYSIS OF LINEAR SYSTEM:

Introduction, Linear system, impulse response, Response of a linear system, Linear time invariant (LTI) system, Linear time variant (LTV) system, Concept of convolution in time domain and frequency domain, Graphical representation of convolution, Transfer function of a LTI system, Related problems. Filter characteristics of linear systems. Distortion less transmission through a system, Signal bandwidth, system bandwidth, Ideal LPF, HPF and BPF characteristics, Causality and Poly-Wiener criterion for physical realization, relationship between bandwidth and rise time

Unit –IV CORRELATION:

Auto-correlation and cross-correlation of functions, properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between Convolution and correlation, Detection of periodic signals in the presence of noise by correlation, Extraction of signal from noise by filtering.

SAMPLING THEOREM: Graphical and analytical proof for Band Limited Signals, impulse sampling, Natural and Flat top Sampling, Reconstruction of signal from its samples, effect of under sampling –Aliasing, Introduction to Band Pass sampling, Related problems.

UNIT-V: Z-TRANSFORM:

Concept of Z-Transform of a discrete sequence. Region of convergence in Z-Transform, constraints on ROC for various classes of signals, Inverse Z-transform, properties of Z-transforms. Revision of Laplace Transform ,ROC for various signals Distinction between Laplace, Fourier and Z transforms.

TEXT BOOKS:

1. Signals, Systems & Communications - B.P. Lathi, BS Publications,2003.
2. Signals and Systems - A.V. Oppenheim, A.S. Willsky and S.H. Nawab, PHI,2nd Edn,1997
3. Signals & Systems - Simon Haykin and Van Veen, Wiley, 2ndEdition,2007

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. I Sem (III Semester)			
Course Code XXXXX	MATHEMATICS-III (Common to ECE, EEE, AME, MECH, PET, MM, CE)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisite(s): Derivatives, integration and complex number To familiarize the transform techniques and complex variables.		3	0	0	3

Course Objective:

- To familiarize the techniques in partial differential equations and complex variables.
- To equip the students to solve application problems in their disciplines.

Course Outcomes:

On Completion of the course, the students will be able to-	
C01:	Apply the knowledge of Beta and Gamma function.
C02:	Apply the knowledge of Laplace Transforms.
C03:	Evaluate Fourier series for different functions. Understand properties of Fourier transformation apply for different function.
C04:	Solve first order partial differential equations.
C05:	Solve high order partial differential equations with constant coefficients.

Syllabus:

Unit I: Beta and Gamma function

8hrs

Beta and Gamma functions and their properties, relation between Beta and Gamma functions, evaluation of improper integrals.

Unit II: Laplace Transforms

10 hrs

Definition of Laplace transform, existence conditions, properties of Laplace transforms, inverse Laplace transforms, transforms of derivatives, transforms of integrals, multiplication by t^n , division by t , convolution theorem, periodic functions, unit step function, unit impulse function. (without proofs). Applications to ordinary linear differential equations with constant coefficients.

Unit III: Fourier series and Fourier Transforms

10 hrs

Dirichlet's conditions, Fourier series, functions of any period, odd and even functions - half range series. Fourier integrals, Fourier cosine and sine integrals, Fourier transform, sine and cosine transform.

Unit IV: First Order Partial Differential Equations

10 hrs

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions. Solutions of first order linear (Lagrange) partial differential equation and nonlinear (Standard types) equations.

Unit V: Higher Order Partial Differential Equations

10hrs

Solutions of linear partial differential equations with constant coefficients. RHS term of the type e^{ax+by} , $\sin(ax+by)$, $\cos(ax+by)$, $x^m y^n$. Method of separation of variables. Solutions of one dimensional wave, Heat and two-dimensional Laplace equation.

Regulation GRBT-20	GODAVARI INSTITUTE OF ENGINEERING & TECHNOLOGY (Autonomous)	II B.Tech I Semester			
Course Code	PROGRAMMING WITH JAVA LAB ECE				
Teaching	Total contact hours: 48	L	T	P	C
Prerequisite(s): Basic understanding of any Programming language and OOPS concepts		0	0	3	1.5

Course Objective(s):

- This course is intended to teach the Java programming language.
- To develop the skills of programming for Object oriented concepts.

Course Outcomes:

After successful completion of this course, a successful student will be able to:

- CO-1: Identify classes, objects, members of a class and the relationship among them needed for a specific problem
- CO-2: Implement programs to distinguish different forms of inheritance and Exception Handling mechanism
- CO-3: Create packages and to reuse them
- CO-4: Develop multithreaded application using synchronization concept.
- CO-5: Design GUI based applications using Swings and AWT.

List of Programs:

1. The Fibonacci sequence is defined by the following rule. The first 2 values in the sequence are 1, 1. Every subsequent value is the sum of the 2 values preceding it. Write a Java Program that uses both recursive and non-recursive functions to print then n^{th} value of the Fibonacci sequence.
2. a. Write a Java Program that prompts the user for an integer and then prints out all the prime numbers up to that integer.
b. Write a java program to implement call-by-value and call- by-reference mechanisms.
3. a. Write a Java Program that checks whether a given string is a palindrome or not.
b. Write a Java Program to check the compatibility for multiplication, if compatible multiply two matrices and find its transpose.
4. Write a Java program to implement constructor overloading and method overloading.
5. Write a Java Program that illustrates how run time polymorphism is achieved.
6. Write a Java Program that illustrates the use of super keyword.
7. Write a Java Program to create and demonstrate packages.
8. Write a Java Program, using String Tokenizer class, which reads a line of integers and then displays each integer and the sum of all integers.
9. Write a Java Program that reads on file name form the user then displays information about whether the file exists, whether the file is readable/ writable, the type of file and the length of the file in bytes and display the content of the using File Input Stream class.
10. Write a Java Program that display the number of characters, lines and words in a text/text file.
11. Write a Java Program to implement a Queue, using user defined Exception Handling (also make use of throw. throws).

12. Write a Java Program demonstrating the life cycle of a thread.
13. Write an Applet that displays the content of a file.
14. Write a Java Program that works as a simple calculator. Use a grid lay out to arrange buttons for the digits and for the +-*?% operations. Add a text field to display the result
15. Write a Java Program for handling mouse events, keyboard events.
16. a. Write a Java Program that allows user to draw lines, rectangles and ovals.
b. Write a Java Program that lets users create Pie charts. Design your own user interface (with Swings & AWT).

Regulation	Godavari Institute of Engineering & Technology (Autonomous)										IIB.Tech. I Sem (3 semester)			
GRBT-20 CourseCode	Electronic Devices and Circuits Lab (Common for ECE and EEE)													
Teaching	Totalcontacthours-36										L	T	P	C
Prerequisite(s):Knowledge of Engineering physics related to semiconductor, mathematics like trigonometry, integration etc.											-	-	3	2
CO5	2	2	2	2	2	3	-	-	-	-	-	-		

Course Objective:

1. To Observe the working nature of different electronic measuring equipment's
2. To Observe the characteristics of different diodes and transistors
3. To plot the characteristics of different amplifier circuits
4. To implement the biasing circuits
5. To observe the characteristics of LED and LDR.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Able to understand the working nature of different electronic measuring equipment
CO2:	Understand the characteristics of different diodes and transistors
CO3:	Able to understand the working of amplifiers for different frequencies
CO4:	Understand the need of biasing and also knows the different biasing methods
CO5:	Understand the working of LED and LDR

Syllabus:

List of Experiments:

PART A: Electronic Workshop Practice

1. Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Coils, Gang Condensers, Relays, Bread Boards.
2. Identification, Specifications and Testing of active devices, Diodes, BJTs, JFETs, LEDs, LCDs, SCR, UJT.
3. Soldering Practice- Simple circuits using active and passive components.
4. Study and operation of Ammeters, Voltmeters, Analog and Digital Multimeters, Function Generator, Regulated Power Supply and CRO.

PART B: List of Experiments

(For Laboratory Examination-Minimum of Ten Experiments)

1. P-N Junction Diode Characteristics

Part A: Germanium Diode (Forward bias & Reverse bias)

Part B: Silicon Diode (Forward Bias only)

2. Zener Diode Characteristics

Part A: V-I Characteristics

Part B: Zener Diode as Voltage Regulator

3. Rectifiers (without and with c-filter)

Part A: Half-wave Rectifier

Part B: Full-wave Rectifier

4. BJ T Characteristics (CE Configuration)

Part A: Input Characteristics

Part B: Output Characteristics

5. BJ T Characteristics (CB Configuration)

Part A: Input Characteristics

Part B: Output Characteristics

6. FET Characteristics (CS Configuration)

Part A: Drain Characteristics

Part B: Transfer Characteristics

7. SCR Characteristics

8. UJ T Characteristics

9. Transistor Biasing

10. CRO Operation and its Measurements using lissajous figures

11. BJT-CE Amplifier

12. Emitter Follower-CC Amplifier

13. FET-CS Amplifier

14. LED Characteristics

15. LDR Characteristics

16. Photo Diode Characteristics

17. Diode Applications

PART C: Equipment required for Laboratory

1. Bread boards.
2. Ammeters (Analog or Digital)
3. Voltmeters (Analog or Digital)
4. Active & Passive Electronic Components
5. Regulated Power supplies
6. Analog/Digital Storage Oscilloscopes
7. Analog/Digital Function Generators
8. Digital Multimeters
9. Decade resistance Boxes/Rheostats
10. Decade Capacitance

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. I Sem (3 semester)			
Course Code	NETWORK ANALYSIS LAB				
Teaching	Total contact hours-36	L	T	P	C
Prerequisite(s): Knowledge of Engineering Mathematics, Network analysis		-	-	3	2

Course Objective:

1. To Observe the working nature of different electrical measuring equipments
2. To Verify different theorems in networks.
3. To Observe the pattern of series and parallel resonance.
4. To Calculate different parameters of the given two-port networks

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Understand the working nature of different electrical measuring equipment
CO2:	Verify the working of different theorems like Norton's ,Thevinen's Etc.
CO3:	Observe the concept of parallel and series resonance.
CO4:	Understand the concept of two-port networks and calculate the parameters.

Syllabus:

List of Experiments:

1. Verification of Thevinen's and Norton's theorem.
2. Verification of super position theorem of Maximum power transfer theorem.
3. Verification of compensation theorem and reciprocity theorem.

4. Verification of Milliman's theorem.
5. Calculation of Z-parameters.
6. Series and parallel resonance.
7. Determination of self, mutual induction and co-efficient of coupling.
8. Calculation of Y-parameters.
9. Transmission line parameters and hybrid parameters calculation.
10. Measurement of active power for star and delta connected balanced loads.
11. Measurement of re-active power for star and delta connected balanced loads.
12. Measurement of 3 phases power by 2 watt meter method for unbalanced loads.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	B.Tech.			
Course Code	ENGLISH FOR CAREER				
Teaching	Total contact hours	L	T	P	C
Prerequisite(s): Learner should be equipped with Functional Grammatical skills and interactive ability					

Course Objective: This course aims

- To achieve proficiency in formal English usage
- To improve both written and spoken communication in connection with professional needs
- To make them industry ready in terms of grooming, speaking in in-formal occasions

Course Outcomes

On Completion of the course, the students will be able to-	
C01:	Understand the necessity to improve four language skills
C02:	Acquire knowledge about public speaking ability
C03:	Strengthen their grammatical skills in the language
C04:	Improve necessary vocabulary and academic writing skills
C05:	Improve academic writing skills

Syllabus:

Unit-1

Technical Communication: Report writing: Importance, structure, drafting of reports, Types of reports-formal-informal reports-Business Writing: Sales letters, notices, agenda and minutes of the meeting-Information Transfer

Unit-2

Communication Practice -Debating and Role Playing-Meaning-Do's and don'ts-Voice modulation-fluency-Keep it short and sweet-formal discussions-summarizing techniques- Group discussion-do's and don'ts -JAM sessions

Unit-3

Grammar In Use-Tense and aspect-Verb patterns-usage of progressive tense- Types and kinds of sentences -Question tags-Usage of Auxiliaries- Common errors

Unit-4

Vocabulary Building-Affixes- synonyms and antonyms-**Phrasal verbs-Homonyms-Eponyms-Idioms-verbal Analogies-one word substitutes-Collocations**

Unit-5

(a)Occupational competency- Interview skills- self introduction-performance management planning-strategic planning-Negotiation techniques-visual communication- - delegation-filling personal information-C.V.preparation-Mock Interviews

(b) LSRW Skills-Selected lessons from UNLOCK-2 published by Cambridge University Press, mobile etiquette, table manners, dressing style

Prescribed Text Books: UNLOCK SERIES from Cambridge University Press

Unlock Book-2: Reading and Writing

Listening and Speaking

GRBT 20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. II Sem (4th semester)			
Course Code	ELECTRONIC CIRCUIT ANALYSIS				
Teaching	Total contact hours-60	L	T	P	C
Prerequisites: Knowledge of electronic devices and circuits & also solve the		3	1	-	3

Course Objectives:

1. Familiarize the student with the analysis and design of different amplifier circuits (single and multi stage) using BJT and FET's.
2. Small signal equivalent circuit analysis of BJT and FET amplifiers in different configurations is explained.
3. Cascading of single stage amplifiers is discussed and necessary expressions are derived.
4. The concept of feedback is introduced and effect of negative and positive feedback on amplifier characteristics is explained.
5. Different types of Power amplifiers and various tuned amplifier circuits are analyzed.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Knowledge on both single and multistage amplifiers, design and analysis of multi stage amplifiers using BJT and FET.
CO2:	Analysis of small signal low and high frequency transistor amplifier circuits using BJT and FET.
CO3:	The expressions for frequency of oscillation and condition for oscillation of RC and LC oscillators and their amplitude and frequency stability concept.
CO4:	Know the classification of the power amplifiers and their efficiency.
CO5:	Analysis of Tuned amplifiers with performance comparison.

UNIT-I

SINGLE STAGE AMPLIFIERS

Classification of Amplifiers - Distortion in amplifiers, Analysis of CE, CC and CB configurations with simplified hybrid model, Analysis of CE amplifier with emitter resistance and emitter follower, Design of single stage RC coupled Amplifier using BJT.

MULTISTAGE AMPLIFIERS

Analysis of Cascaded RC coupled BJT amplifiers, Cascode Amplifier, Darlington Pair, Different Coupling Schemes used in Amplifiers - RC coupled amplifiers, Transformer Coupled Amplifier, Direct Coupled Amplifier.

UNIT-II HIGH FREQUENCY RESPONSE OF AMPLIFIERS

Frequency response of BJT Amplifier, Analysis at low and high frequencies, Miller's theorem and its dual, Effect of coupling and bypass capacitors. The Hybrid pi model - Common Emitter Transistor Model, CE Short Circuit current gain, current gain with resistive load, Single stage CE transistor Amplifier Response, Gain - Bandwidth Product, Emitter follower at high frequencies.

MOS AMPLIFIERS: Basic Concepts, MOS Small signal model, Common source amplifier with resistive load.

UNIT-III FEEDBACK AMPLIFIERS

Concepts of feedback, Classification of feedback amplifiers, General characteristics of negative feedback amplifiers, Effect of feedback on amplifier characteristics, Voltage Series, Voltage Shunt, Current Series and Current Shunt Feedback Configurations, Illustrative examples.

OSCILLATORS

Classification of oscillators, Condition for oscillations, RC Phase shift Oscillators, Generalized analysis of LC Oscillators-Hartley and Colpitts Oscillators, Wien Bridge and crystal Oscillators, Stability of Oscillators

UNIT-IV POWER AMPLIFIERS

Classification, Class A Power amplifiers, Transformer Coupled Class A Audio Power amplifier, Efficiency of class A amplifier, Class B Power amplifier, Efficiency of class B power Amplifier, class B Push pull power Amplifier, Complementary Symmetry Class B Push Pull power Amplifier, Distortion of Power Amplifiers, Thermal Stability and Heat sinks

UNIT-V TUNED AMPLIFIERS

SINGLE TUNED AMPLIFIERS

Introduction, Q Factor, classification of small signal tuned amplifiers, single tuned capacitance coupled amplifier, tapped single tuned capacitance coupled amplifier, single tuned inductively coupled amplifier, and Effect of Cascading Single tuned Amplifiers on bandwidth.

DOUBLE TUNED AMPLIFIERS: Introduction, double tuned amplifier, Effect of Cascading Double Tuned Amplifiers on Bandwidth, Stagger Tuned Amplifiers, and Stability of tuned amplifiers.

CourseCode	ANALOG COMMUNICATIONS				
Teaching	Total contact hours–53				
Prerequisites: Knowledge of Communication with in analog signals with relevant mathematical expressions		L	T	P	C
		3	-	-	3

Course Objectives:

1. Familiarize with the fundamentals of analog communication systems
2. Familiarize with various techniques for analog modulation and demodulation of signals
3. Understand the concept of noise and detection of signals in presence of noise.
4. Understand different types of radio transmitters and receivers.
5. Study the concept of sampling and pulse modulation techniques.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Explain the concept of communication systems, and analyze the mathematical expressions for AM modulation and demodulation.
CO2:	Relate the different modulation and demodulation techniques and analyze the noise calculations.
CO3:	Analyze generation and detection of FM signals in both time and frequency domains and its noise calculations.
CO4:	Explain various issues in AM and FM transmitters and receivers
CO5:	Sample analog signals and pulse modulation techniques.

Syllabus:

UNIT- I AMPLITUDE MODULATION

Introduction to communication system, Multiplexing, Frequency division multiplexing, Modulation, Need for modulation, Amplitude modulation: definition, time domain and frequency domain description, Single tone AM modulation, Power relations in AM waves, Generation of AM waves, Square law modulator, Switching modulator, Detection of AM waves; Square law detector, Envelope detector, Noise in analog communication system, Figure of merit of AM system

UNIT- II DSB& SSB MODULATION

Double side band suppressed carrier modulators, Balanced modulators, Ring modulator, Coherent detection of DSB-SC modulated waves, COSTAS Loop, SSB: Frequency and Phase discrimination method of SSB, Demodulation of SSB, Generation of VSB, Detection of VSB, Figure of merit of DSB & SSB system

UNIT- III ANGLE MODULATION

Frequency Modulation: Single tone frequency modulation, Spectrum analysis of sinusoidal FM wave, Narrow band FM, Wide band FM, Generation of FM waves, Direct FM, Detection of FM waves: Balanced frequency discriminator, zero crossing detector, Phase locked loop, Comparison of FM & AM, figure of merit of FM, Threshold effect in angle modulation system, Pre-emphasis & de-emphasis.

UNIT-IV TRANSMITTERS& RECEIVERS

RADIO TRANSMITTER: Classification of transmitter, AM transmitter, Effect of feedback on performance of AM transmitter, FM transmitter; Variable reactance type and Indirect FM transmitter, Frequency stability in FM transmitter.

RADIO RECEIVER: Tuned radio frequency receiver, Super-heterodyne receiver, RF characteristics, AGC, Amplitude limiting.

UNIT- V PULSE MODULATION

Sampling: Nyquist rate and sampling theorem, Time division multiplexing, Types of pulse modulation, PAM (Single polarity, double polarity), PAM Demodulation, PWM: Generation & demodulation of PWM, PPM, Generation and demodulation of PPM, TDMVs FDM.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. II Sem (4th semester)			
Course Code	RANDOM VARIABLES AND STOCHASTIC PROCESSES				
Teaching	Total contact hours-50	L	T	P	C
Prerequisites: Mathematics basics like integral and differential calculus		3	1	-	3

Course Objectives:

1. To give students an introduction to elementary probability theory so that they can use the concepts of statistical analysis.
2. To teach students how to apply sums and integrals to compute probabilities, means and expectations.
3. To mathematically model the random process with the help of probability theory Concepts.
4. To introduce the importance of random variables, probability distribution and stochastic processes.
5. To analyze the LTI systems with input as a random process.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Understand probabilities and able to solve using an appropriate sample space.
CO2:	Compute various operations like expectations from probability density functions (pdfs) and probability distribution functions
CO3:	Perform Likelihood ratio tests from pdf for statistical engineering problems.
CO4:	Mean and covariance functions for simple random variables. Understand Auto-correlation and cross correlation properties between two random variables.
CO5:	Explain the concept of random process, differentiate between stochastic and Ergodic processes and power density spectrum of a random process with random inputs.

Syllabus:

UNIT I: PROBABILITY AND RANDOM VARIABLE:

THE RANDOM VARIABLE: Concepts of probability, random experiments, sample space, events and nature of events Probability, Types Of Axioms, Random Variable- Properties, Types of Distribution Functions – Probability Mass Function, Probability Density Function, -Properties, Binomial, Poisson, Uniform, Normal, Exponential and Rayleigh distributions and their properties,

UNIT II

OPERATIONS ON SINGLE & MULTIPLE RANDOM VARIABLE – EXPECTATIONS

Introduction, Expected Value of a Random Variable, Function of a Random variable, Moments about the origin, Central Moments, Variance , Transformations of a Random Variable: Monotonic Transformations of a Continuous Random Variable, Non-Monotonic Transformations of a Continuous Random Variable, Introduction to the concept of multiple random variables, concepts of conditional and unconditional joint distribution and density functions-related properties, Transformations of multiple random variables, Linear transformation of Gaussian Random Variables.

UNIT III

RANDOM PROCESSES IN THE TIME DOMAIN

Introduction to the concept of Random Process-Temporal characteristics, Classification of Random Processes, Deterministic and Non-deterministic random processes, Definitions of Distribution and Density Functions of a Random Process, Concepts of Stationary and Statistical Independence of Random Processes, Classification of Stationary Random Processes (First order, Second order, Wide-sense and Strict-sense Stationary Processes). Autocorrelation function and its properties, Cross correlation function and its properties, Covariance function. Concept of Time Averages and Ergodicity.

UNIT IV

RANDOM PROCESSES IN THE FREQUENCY DOMAIN

Introduction to the concept of Random Process-Spectral characteristics, The Power Spectrum and its properties, Relation between Power Spectrum and Autocorrelation Function, The Cross-Power Density Spectrum and its properties, Relation between Cross-Power Spectrum and Cross-correlation Function.

UNIT V

LINEAR SYSTEMS WITH RANDOM INPUTS

Introduction to Random Signal Response of Linear Systems: System Response – Convolution, Mean and Mean-Squared value of System Response, Autocorrelation Function of Response, Cross-Correlation Functions of Input and Output. Spectral Characteristics of System Response: Power Density Spectrum of Response, Cross-Power Density Spectra of Input and Output. Concepts of Band pass, Band-Limited and Narrowband Processes – properties. Concepts of thermal noise.

Course Code	ELECTROMAGNETIC WAVES AND TRANSMISSION LINES				
Teaching	Total contact hours-60	L	T	P	C
Prerequisites: Knowledge of Electromagnetic waves and Transmission lines		3	1	-	3

Course Objective:

1. To introduce the concept of Vectors and their applications in free space
2. To impart the knowledge of electric and magnetic fields in real time applications.
3. To introduce the fundamental theory of electromagnetic waves in transmission lines and their practical applications.
4. To study the propagation characteristics of electromagnetic wave in bounded and unbounded media.
5. To calculate various line parameters by conventional and graphical methods.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	understand how EM waves will propagate in free space and their characteristics at the boundary between media.
CO2:	learn Maxwell's equations to understand boundary conditions of time varying fields.
CO3:	Analyze electromagnetic wave propagation and attenuation in various medium and propagation through boundaries between media
CO4:	Analyzes reflection and refraction of electromagnetic waves propagated in normal and oblique incidences
CO5:	learn parameters and transmission lines

UNIT I ELECTROSTATICS

Review of Coordinate system, Coulomb's Law, Electric Field Intensity – Fields due to Different Charge Distributions, Electric Flux Density, Gauss Law and Applications, Electric Potential, Maxwell's Two Equations for Electrostatic Fields, Energy density, Convection and Conduction Currents, Continuity Equation, Relaxation Time, Poisson's and Laplace's Equations; Capacitance.

UNIT-II MAGNETOSTATICS

Biot-Savart's Law, Ampere's Circuital Law and Applications, Magnetic Flux Density, Maxwell's Two Equations for Magneto static Fields, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields

Faraday's Law and Transformer emf, Inconsistency of Ampere's Law and Displacement Current Density, Maxwell's Equations in Different Final Forms and Word Statements. Conditions at a Boundary Surface: Dielectric-Dielectric and Dielectric-Conductor Interfaces. Related Problems.

Unit -III MAXWELL'S EQUATION

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves, Wave Propagation in Lossless and Conducting Media, Conductors & Dielectrics – Characterization, Polarization, Reflection and Refraction of Plane Waves – Normal and Oblique Incidences for both Perfect Conductor and Perfect Dielectrics, Brewster Angle, Critical Angle and Total Internal Reflection, Surface Impedance. Poynting Vector and Poynting Theorem

Unit -IV TRANSMISSION LINES – I

Types, Parameters, Equivalent Circuits, Transmission Line Equations, Primary & Secondary Constants, Expressions for Characteristic Impedance, Propagation Constant, Phase and Group Velocities, Infinite Line, Lossless lines, distortion less lines, Illustrative Problems.

UNIT -V TRANSMISSION LINES – II

Input Impedance Relations, SC and OC Lines, Reflection Coefficient, VSWR. Impedance Transformations, $\lambda/8$, $\lambda/4$ and $\lambda/2$ Lines –. Smith Chart – Construction and Applications, Single Stub Matching, Illustrative Problems.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	B.Tech II-I Year			
Course Code	MANAGERIAL ECONOMICS AND FINANCIAL ANALYSIS (Common to all Branches)				
Teaching	Total contact hours-48	L	T	P	C
Prerequisite(s): Basic Knowledge of Economics and Accounts		3	0	0	3

Course Objective:

1. To understand the concept and nature of Managerial Economics and its relationship with other disciplines and also to understand the Concept of Demand and Demand forecasting.
2. To familiarize about the Production function, Input Output relationship, Cost-Output relationship and Cost-Volume-Profit Analysis.
3. To understand the nature of markets, Methods of Pricing in the different market structures and to know the different forms of Business organizations and the concept of Business Cycles.
4. To learn different Accounting Systems, preparation of Financial Statements and uses of different tools for performance evaluation.
5. To understand the concept of Capital, Capital Budgeting and the techniques used to evaluate Capital Budgeting proposals.

Course Outcomes:

On Completion of the course, the learner will be able to-	
CO1:	Estimate the Demand and demand elasticity's for a product
CO2:	Understand the Input-Output-Cost relationships and estimation of the least cost combination of inputs.
CO3:	Understand the nature of different markets and Price Output determination under various market conditions and also to have the knowledge of different Business Units.
CO4:	Prepare Financial Statements and the usage of various Accounting tools for Analysis.
CO5:	Evaluate various investment project proposals with the help of capital budgeting techniques for decision making.

Unit I:

Introduction to Managerial Economics and Demand Analysis:

Definition of Managerial Economics –Scope of Managerial Economics and its relationship with other subjects –Concept of Demand, Types of Demand, Determinants of Demand- Demand schedule, Demand curve, Law of Demand and its limitations- Elasticity of Demand, Types of Elasticity of Demand and Measurement- Demand forecasting and Methods of forecasting.

Unit II:

Theories of Production and Cost Analysis:

Theories of Production function- Law of Variable proportions-Isoquants and Isocosts and choice of least cost factor combination-Concepts of Returns to scale and Economies of scale-Different cost concepts: opportunity costs, explicit and implicit costs-Fixed costs, Variable Costs and Total costs, Cost

–Volume-Profit analysis-Determination of Breakeven point(problems)- Managerial significance and limitations of Breakeven point.

Unit III:

Introduction to Markets, Theories of the Firm & Pricing Policies:

Market Structures: Perfect Competition, Monopoly, Monopolistic competition and Oligopoly – Features

– Price and Output Determination- Methods of Pricing: Average cost pricing, Limit Pricing, Market Skimming Pricing, Internet Pricing: (Flat Rate Pricing, Usage sensitive pricing) and Priority Pricing, Business Cycles : Meaning and Features – Phases of a Business Cycle. Forms of Business organizations

- Sole Trader, Partnership- Joint Stock Company – State/Public Enterprises.

Unit IV:

Introduction to Accounting & Financial Analysis:

Introduction to Double Entry System, Journal, Ledger, Trail Balance and Preparation of Final Accounts with adjustments – Preparation of Financial Statements-Analysis and Interpretation of Financial Statements-Ratio Analysis.

Unit V:

Capital and Capital Budgeting: Capital Budgeting:

Meaning of Capital-Capitalization Meaning of Capital Budgeting-Time value of money- Methods of appraising Project profitability: Traditional Methods (payback period, accounting rate of return) and modern methods (Discounted cash flow method, Net Present Value method, Internal Rate of Return Method and Profitability Index)

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. II Sem (4th semester)			
Course Code	ELECTRONIC CIRCUIT ANALYSIS LAB				
Teaching	Total contact hours-60	L	T	P	C
Prerequisites: Knowledge of BJT & FET Amplifiers		0	0	3	1.5

Course Objectives:

1. Understand the design of Small Signal Transistor Amplifier models.
2. Understand the concepts feedback amplifiers and oscillators
3. Understand the concepts of multistage amplifier and differential amplifier using BJT
4. Understand the design of different types of power amplifiers
5. Understand the design of different types of tuned amplifiers

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Perform analysis and design of Small Signal Transistor Amplifier models.
CO2:	Design and analysis of feedback amplifiers and oscillators
CO3:	Demonstrate the knowledge of multistage amplifier and differential amplifier using BJT.
CO4:	Design and analysis of different types of power amplifiers
CO5:	Design different types of tuned amplifiers for real time applications

Note: The students are required to design the circuit and perform the simulation using Multisim/ Equivalent Industrial Standard Licensed simulation software tool. Further they are required to verify the result using necessary hardware equipment.

List of Experiments: (Minimum of Ten Experiments has to be performed)

1. Determination of f_{Tof} a given transistor.
2. Voltage-Series Feedback Amplifier
3. Current-Shunt Feedback Amplifier
4. RC Phase Shift/Wien Bridge Oscillator
5. Hartley/Colpitt's Oscillator

6. Two Stage RC Coupled Amplifier
7. Darlington Pair Amplifier
8. Bootstrapped Emitter Follower
9. Class A Series-fed Power Amplifier
10. Transformer-coupled Class A Power Amplifier
11. Class B Push-Pull Power Amplifier
12. Complementary Symmetry Class B Push-Pull Power Amplifier
13. Single Tuned Voltage Amplifier
14. Double Tuned Voltage Amplifier

Equipment required: Software:

- i. Multisim/Equivalent Industrial Standard Licensed simulation software tool.
- ii. Computer Systems with required specifications

Hardware Required:

1. Regulated Power supplies
2. Analog/Digital Storage Oscilloscopes
3. Analog/Digital Function Generators
4. Digital Multimeters
5. Decade Resistance Boxes/Rheostats
6. Decade Capacitance Boxes
7. Ammeters (Analog or Digital)
8. Voltmeters (Analog or Digital)
9. Active & Passive Electronic Components

CO-PO Mapping:

(1: Slight [Low]; 2: Moderate[Medium]; 3: Substantial[High], '-' : No Correlation)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Course Code	ANALOG COMMUNICATION LAB				
Teaching	Total contact hours-36	L	T	P	C
Prerequisite(s): Knowledge of Communication with analog signals		-	-	3	1.5

Course Objective:

1. To Observe the working nature of different communication systems
2. To Observe the different AM techniques.
3. To Observe the different FM techniques and requirements of Emphasis techniques
4. To Observe the different Sampling of analog signals
5. To Observe the Simulation process

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Identify and describe different Amplitude modulation techniques
CO2:	Identify and applying Emphasis techniques in analog systems
CO3:	Sample analog signals
CO4:	Analyze different discrete pulse modulation techniques
CO5:	Understand and Simulate the different codes using MATLAB

Syllabus:

List of Experiments:

PART A: List of Experiments based on Hardware

1. Amplitude modulation- Modulation & Demodulation
2. AM-DSB SC- Modulation & Demodulation
3. Spectrum Analysis of Modulated signal using Spectrum Analyzer
4. Diode Detector
5. Pre-emphasis & De-emphasis
6. Frequency Modulation & Demodulation
7. AGC Circuits
8. Sampling Theorem

9. Pulse Amplitude Modulation & Demodulation.
10. Pulse Width Modulation (PWM)- Modulation & Demodulation
11. Pulse Position Modulation (PPM)- Modulation & Demodulation
12. Phase locked loop (PLL)
13. Characteristics of Mixer

PART B: List of Experiments based on MATLAB Software

1. Amplitude modulation- Modulation & Demodulation
2. AM-DSB SC- Modulation & Demodulation
3. Diode Detector
4. Pre-emphasis & De-emphasis
5. Frequency Modulation & Demodulation
6. Sampling Theorem
7. Characteristics of Mixer
8. Pulse Amplitude Modulation & Demodulation.
9. Pulse Width Modulation (PWM)- Modulation & Demodulation
10. Pulse Position Modulation (PPM)- Modulation & Demodulation

PART C: Equipment required for Laboratory

1. Bread boards.
2. Active & Passive Electronic Components
3. Regulated Power supplies
4. Analog/Digital Storage Oscilloscopes
5. Analog/Digital Function Generators
6. Digital Multimeters
7. Trainer Kits

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	II B.Tech. II Sem (4 semester)			
Course Code	Switching Theory & Logic Devices Laboratory				
Teaching	Total contact hours-36	L	T	P	C
Prerequisite(s): Knowledge of Logic gates & Flip-,flops		-	-	3	1.5

Course Objective:

1. Understand the concepts of logic gates
2. Understand Different Combinational circuits
3. Understand the different standard sequential circuits
4. Understand the verification of Truth tables of Flip-Flops
5. Understand the complex sequential circuits

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Verification of logic gates
CO2:	Design and verification of Combination Circuits
CO3:	Verification of truth tables of Flip-Flops.
CO4:	Verification of Shift Registers operation.
CO5:	Design of various Counter.

List of Experiments: (Minimum of Twelve Experiments has to be performed)

1. Verification of truth tables of Logic gates
Two input (i) OR (ii) AND (iii) NOR (iv) NAND (v) Exclusive OR
(vi) Exclusive NOR
2. Design a simple combinational circuit with four variables and obtain minimal SOP expression and verify the truth table using Digital Trainer Kit
3. Verification of functional table of 3 to 8 line Decoder/De-multiplexer
4. 4 variable logic function verification using 8 to 1 multiplexer.
5. Design full adder circuit and verify its functional table.
6. Verification of functional tables of

- (i) JK Edge triggered Flip-Flop (ii) JK Master Slav Flip-Flop (iii) DFlip-Flop
7. Design a four bit ring counter using D Flip-Flops/JK Flip Flop and verify output
 8. Design a four bit Johnson's counter using D Flip-Flops/JK Flip Flops and verify output
 9. Verify the operation of 4-bit Universal Shift Register for different Modes of operation.
 10. Draw the circuit diagram of MOD-8 ripple counter and construct a circuit using T- Flip-Flops and Test it with a low frequency clock and Sketch the output wave forms.
 11. Design MOD-8 synchronous counter using T Flip- Flop and verify the result and Sketch the output wave forms.
 12. (a) Draw the circuit diagram of a single bit comparator and test the output
 - (b) Construct 7 Segment Display Circuit Using Decoder and 7 Segment LED and test it.

ADD on Experiments:

1. Design BCD Adder Circuit and Test the Same using Relevant IC
2. Design Excess-3 to 9-Complement convertor using only four Full Adders and test the Circuit.
3. Design an Experimental model to demonstrate the operation of 74154 De-Multiplexer using LEDs for outputs.

CO-PO Mapping:

Regulation GRBT-20	GODAVARI INSTITUTE OF ENGINEERING & TECHNOLOGY (Autonomous)				
Course Code	PROGRAMMING WITH PYTHON Common to ME, ECE, MINING, PETROLEUM & AME				
Practice	Total contact hours: 48	L	T	P	C
Prerequisite(s):	Knowledge of any programming language	0	1	2	2

Course Objective(s):

- This course is intended to teach adequate knowledge on different data structures technique.
- To develop solutions for problems demonstrating usage of control structures, modularity, I/O and other standard language constructs.

Course Outcome(s):

After successful completion of this course, a student will be able to-

CO-1: To learn and understand Python programming basics and paradigm

CO-2: Handle different data structures.

CO-3: Understand the use of control statements, function overloading, operator overloading in real time application

CO-4: Implement files using various file operations.

CO-5: Apply knowledge to handle exception handling and database connectivity

List of Programs:

1. Write a program that asks the user for a weight in kilograms and converts it to pounds. There are 2.2 pounds in a kilogram.
2. Write a program that asks the user to enter three numbers (use three separate input statements). Create variables called total and average that hold the sum and average of the three numbers and print out the values of total and average.
3. Write a program that uses a for loop to print the numbers 8, 11, 14, 17, 20, ..., 83,86,89.
4. Write a program that asks the user for their name and how many times to print it. The program should print the user's name, the specified number of times.
5. Use a for loop to print a triangle like the one below. Allow the user to specify how high the triangle should be.

```

*
**
***
****

```
6. Write a program that asks the user to enter a word and prints out whether that word contains any vowels.
7. Write a program that asks the user to enter two strings of the same length. The program should then check to see if the strings are of the same length. If they are not, the program should print an appropriate message and exit. If they are of the same length, the program should alternate the characters of the two strings. For example, if the user enters abcde and ABCDE the program should print out AaBbCcDdEe.

8. Write a program that generates a list of 20 random numbers between 1 and 100 and perform the following.
 - (a) Print the list.
 - (b) Print the average of the elements in the list.
 - (c) Print the largest and smallest values in the list.
 - (d) Print the second largest and second smallest entries in the list
 - (e) Print how many even numbers are in the list.
9. Write a program that asks the user for an integer and creates a list that consists of the factors of that integer.
10. Write a program that removes any repeated items from a list so that each item appears at most once. For instance, the list [1,1,2,3,4,3,0,0] would become [1,2,3,4,0].
11. Write a program that asks the user to enter a length in feet. The program should then give the user the option to convert from feet into inches, yards, miles, millimeters, centimeters, meters, or kilometers. Say if the user enters a 1, then the program converts to inches, if they enter a 2, then the program converts to yards, etc. While this can be done with if statements, it is much shorter with lists and it is also easier to add new conversions if you use lists.
12. Write a function called sum_digits that is given an integer num and returns the sum of the digits of num.
13. Write a function called number_of_factors that takes an integer and returns how many factors the number has.
14. Write a function called is_sorted that is given a list and returns True if the list is sorted and False otherwise.
15. Write a function called primes that is given a number n and returns a list of the first n primes. Let the default value of n be 100.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	!! B.Tech. II Sem (3rd semester)			
Course Code	CONSTITUTION OF INDIA				
Teaching	Total contact hours - 32	L	T	P	C
Prerequisite(s): Basic knowledge on Indian Constitution and administrative systems		2	-	-	0

Course Objective:

- Impart the role of constitution and human rights
- Aware of the Central administrative system and National policies.
- Aware of the State administrative system and State policies.
- Aware of the Local administrative system and policies.
- Role of Electoral system in India

Course Outcomes:

On Completion of the course, the students will be able to-	
C01	List out the fundamental Rights and Duties
C02	Explain the Union Government and Administrative system
C03	Explain the State Government and Administrative system
C04	Explain the Local Administrative system
C05	Write the role of Election commission

Syllabus:

UNIT -I:

Introduction: Constitution' meaning of the term,, Indian Constitution: Sources and constitutional history, Features: Citizenship, Preamble, Fundamental Rights and Duties, Directive Principles of State Policy

UNIT -II:

Union Government and its Administration: Structure of the Indian Union: Federalism, Centre- State relationship, President: Role, power and position, PM and Council of ministers, Cabinet and Central Secretariat, Lok Sabha, Rajya Sabha

UNIT -III:

State Government and its Administration: Governor: Role and Position, CM and Council of ministers, State Secretariat: Organisation, Structure and Functions

UNIT -IV:

Local Administration: District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation,

[illegible]

Regulation GRBT- 20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. I Sem (5 th Semester)			
Course Code	LINEAR & DIGITAL IC ALPPLICATIONS				
Teaching	Total Contact Hours - 50	L	T	P	C
Prerequisites: Electronic Devices & Circuits, Switching Theory and Logic, Electronic Circuit Analysis.		3	4	-	3

Course Objectives:

1. To introduce the basic building blocks of linear integrated circuits.
2. To teach the linear and non - linear applications of operational amplifiers.
3. To introduce the theory and applications of analog multipliers and PLL.
4. To teach the theory of ADC and DAC.
5. To understand and implement the working of basic digital circuits.

On Completion of the course, students will be able to	
CO1:	Understand the internal operation of Op-Amp and its specifications.
CO2:	Analyze and design linear and nonlinear applications using Op-Amp.
CO3:	Operate 555 timers in different modes like bistable, monostable and astable operations and study their applications.
CO4:	Understand the conversion process of ADC and DAC in digital electronics.
CO5:	Explain the differences between CMOS and TTL logic families and study various digital ICs.

UNIT – 1 Operational Amplifier

Ideal and Practical Op-Amp, Op-Amp Characteristics, DC and AC Characteristics, features of 741 Op-Amp, Modes of Operation Inverting, NonInverting, Differential, Instrumentation Amplifier, AC Amplifier, Differentiators and Integrators, Comparators, Schmitt Trigger.

Voltage Regulators: Introduction to Voltage Regulators, Features of 723 Regulator, Three Terminal Voltage Regulators

UNIT – 2 Op-Amp, IC-555 & IC 565 Applications

Introduction to Active Filters, Characteristics of Band pass, Band reject and All Pass Filters, Analysis of 1st order LPF & HPF Butterworth Filters, Waveform Generators – Triangular, Saw tooth, Square Wave, IC555 Timer - Functional Diagram, Monostable, and Astable Operations, Applications, IC565 PLL – Block Schematic, Description of

Individual Blocks, Applications.

UNIT – 3 Data Converters

Introduction, Basic DAC techniques, Different types of DACs-Weighted resistor DAC, R-2R ladder DAC, Inverted R-2R DAC, Different Types of ADCs - Parallel Comparator Type ADC, Counter Type ADC, Successive Approximation ADC and Dual Slope ADC, DAC and ADC Specifications.

UNIT – 4 Digital Integrated Circuits

Classification of Integrated Circuits, Comparison of Various Logic Families
Combinational Logic ICs – Specifications and Applications of TTL-74XX & Code
Converters, Decoders, Demultiplexers, Encoders, Priority Encoders, Multiplexers,
Demultiplexers, Priority Generators/Checkers, Parallel Binary Adder/Subtractor,
Magnitude Comparators.

UNIT – 5 Sequential Logic ICs and Memories

Familiarity with commonly available 74XX CMOS 40XX Series ICs – All Types of
Flip-flops, Synchronous Counters, Decade Counters, Shift Registers.

Memories - ROM Architecture, Types of ROMs & Applications, RAM Architecture, Static
& Dynamic RAMs.

Text Books:

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. I Sem (5 th Semester)			
Course Code	DIGITAL COMMUNICATIONS				
Teaching	Total Contact Hours - 50	L	T	P	C
Prerequisites: Knowledge of Signals & Systems, Random Variables and Stochastic Process		3	0	-	3

Course Objectives:

1. To understand the building blocks of digital communication system.
2. To understand the pulse digital modulation systems such as PCM, DPCM and DM.
3. To analyze the performance of various digital modulation techniques in terms of probability of error.
4. To understand the concept of entropy and need for source coding.
5. To understand linear block codes, cyclic codes and convolution codes.

On Completion of the course, students will be able to	
CO1:	Explain the conventional digital communication system.
CO2:	Discuss the pulse digital modulation schemes such as PCM, DPCM and DM.
CO3:	Evaluate the performance of various digital modulation techniques in terms of probability of error.
CO4:	Analyze the performance of digital communication system in the presence of noise
CO5:	Compute and analyze block codes, cyclic codes and convolution codes.

UNIT – 1

PULSE DIGITAL MODULATION: Elements of digital communication systems, advantages of digital communication systems, Elements of PCM: Sampling, Quantization & Coding, Quantization error, Companding in PCM systems. Differential PCM systems (DPCM), Delta modulation, its draw backs, adaptive delta modulation, comparison of PCM and DM systems, noise in PCM and DM systems

UNIT II: DIGITAL MODULATION TECHNIQUES:

Introduction, ASK, FSK, PSK, DPSK, DEPSK, QPSK, M-ary PSK, ASK, FSK, similarity of BFSK and BPSK.

UNIT III:

DATA TRANSMISSION: Base band signal receiver, probability of error, the optimum filter, matched filter, probability of error using matched filter, coherent reception, non-coherent detection of FSK, calculation of error probability of ASK, BPSK, BFSK, DPSK

UNIT IV:

INFORMATION THEORY: Discrete messages, concept of amount of information and its properties. Average information, Entropy and its properties, Information rate, Mutual information and its properties

SOURCE CODING: Introductions, Advantages, Shannon's theorem, Shannon- Fanocoding, Huffman coding, efficiency calculations, channel capacity of discrete and analog Channels, capacity of a Gaussian channel, bandwidth-S/N trade off.

UNIT V:

LINEAR BLOCK CODES: Introduction, Matrix description of Linear Block codes, Error detection and error correction capabilities of Linear block codes, Hamming codes, Binary cyclic codes, Algebraic structure, encoding, syndrome calculation, BCH Codes.

CONVOLUTION CODES: Introduction, encoding of convolution codes, time domain approach, transform domain approach. Graphical approach: state, tree and trellis diagram decoding using Viterbi algorithm.

Regulation GRBT - 20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. I Sem (5 th Semester)			
CourseCode	Antenna and Wave Propagation				
Teaching	Total Contact Hours – 50	L	T	P	C
Prerequisites: Knowledge of electro magnetic waves transmission lines and different types of antenna and wave propagation		3	0	-	3

Course Objectives:

1. To understand the applications of electromagnetic waves in frees pace.
2. To introduce working principles of various antenna types.
3. To discuss major applications of antennas with an emphasis on how antennas are employed.
4. To understand the concept of radiation mechanism parameters, current distribution and antenna arrays in various antennas.
5. To understand the concept of wave propagation in various layers and losses due to earth effects

On Completion of the course, students will be able to	
CO1:	Acquire knowledge of basic antenna parameters.
CO2:	Design and analyze wire antennas, loop antennas, reflector antennas, lens antennas, horn antennas and micro-strip antennas.
CO3:	Analyze the field patterns radiated by various types of antennas.
CO4:	Understand the working and characteristics of antenna arrays.
CO5:	Compute several antenna parameters to assess antenna's performance.

UNIT – 1 Antenna Fundamentals:

Antenna Parameters-Radiation Patterns and Mechanism, Patterns in Principal Planes, Main Lobe and Side Lobes, Beam widths, Polarization, Beam Area, Radiation Intensity, Beam Efficiency, Directivity, Gain and Resolution, Antenna Apertures, Aperture Efficiency, Effective Height, Illustrated problems.

Thin Linear Wire Antennas: Potential function and electromagnetic field: Heuristic Approach, Maxwell Equation approach, Potential function for time periodic fields, Radiation from an oscillating Dipole and alternating current element.

UNIT – 2 Antenna Arrays

Two element arrays – different cases, Principle of Pattern Multiplication, N element

Uniform Linear Arrays – Broadside, End fire Arrays, EFA with Increased Directivity, Derivation of their characteristics and comparison; Concept of Scanning Arrays, Directivity Relations (no derivations). Related Problems. Binomial Arrays.

UNIT – 3 Non-Resonant Radiators

Introduction, Traveling wave radiators – Basic concepts, Long wire antennas – Field strength calculations and Patterns, MicroStrip Antennas Introduction, Features, Advantages and Limitations. Rectangular Patch Antennas – Geometry and Parameters, Impact of different parameters on characteristics. Broadband Antennas: Helical Antennas – Significance, Geometry, Basic properties. Design considerations for mono-filer helical antennas in Axial Mode and Normal Modes (Qualitative Treatment).

UNIT – 4 VHF, UHF and Microwave Antennas

Reflector Antennas: Flat Sheet and Corner Reflectors. Paraboloidal Reflectors – Geometry, characteristics, types of feeds, F/D Ratio, Spill Over, Back Lobes, Aperture Blocking, Off-set Feeds, Cassegrain Feeds.

Horn Antennas – Types, Optimum Horns, Design Characteristics of Pyramidal Horns; Lens Antennas – Geometry, Features, Dielectric Lenses and Zoning, Applications, Antenna Measurements – Patterns Required, Set Up, Distance Criterion, Directivity and Gain Measurements (Comparison, Absolute and 3-Antenna Methods).

UNIT – 5 WAVE PROPAGATION

Concepts of Propagation – Frequency ranges and types of propagations. Friis Free Space Equation, Reflection of radio waves from plane surface of earth, Reflection coefficient for horizontal and vertical polarization, Ground Wave Propagation – Field strength, Attenuation Characteristic for vertical and Horizontal polarized wave, Sky Wave Propagation Formation of Ionospheric Layers and their Characteristics, Mechanism of Reflection and Refraction, Critical Frequency, MUF Calculations for flat and spherical earth cases.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. I Sem (5 semester)			
Course Code	Environmental Pollution and Control (Open Elective - I)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisite(s): Basics of Air, Water, Soil and Noise Pollutants, Knowledge of Environmental Engineering-I.		3	-	-	3

Course Objectives:

The objective of this course is:

- Impart knowledge on fundamental aspects of air pollution & control, noise pollution, and solid waste management.*
- Provide basic knowledge on sustainable development.*
- Introduces some basics of sanitation methods essential for protection of community health.*
- Differentiate the solid and hazardous waste based on characterization.*

Unit – I

Air Pollution: Air pollution Control Methods–Particulate control devices – Methods of Controlling Gaseous Emissions – Air quality standards.

Noise Pollution: Noise standards, Measurement and control methods – Reducing residential and industrial noise – ISO14000.

Unit – II

Industrial wastewater Management: – Strategies for pollution control - Volume and Strength reduction – Neutralization – Equalization – Proportioning – Common Effluent Treatment Plants - Recirculation of industrial wastes – Effluent standards.

Unit – III

Solid Waste Management: solid waste characteristics – basics of on-site handling and collection – separation and processing - Incineration- Composting-Solid waste disposal methods – fundamentals of Land filling.

Unit – IV

Hazardous Waste: Characterization - Nuclear waste – Biomedical wastes – Electronic wastes - Chemical wastes – Treatment and management of hazardous waste-Disposal and Control methods.

Unit – V

Sustainable Development: Definition- elements of sustainable developments-Indicators of sustainable development- Sustainability Strategies- Barriers to Sustainability–Industrialization and sustainable development – Cleaner production in achieving sustainability- sustainable development.

Course Outcomes

After completion of the course, a successful student is able to

- Identify the air pollutant control devices
- Have knowledge on the NAAQ standards and air emission standards
- Differentiate the treatment techniques used for sewage and industrial wastewater treatment methods.

4. Understand the fundamentals of solid waste management, practices adopted in his town/village and its importance in keeping the health of the city.
5. Appreciate the methods of environmental sanitation and the management of community facilities without spread of epidemics.
6. Appreciate the importance of sustainable development while planning a project or executing an activity.

(AUTONOMOUS)

Approved by AICTE, Accredited by NBA & NAAC 'A' Grade, Recognized under 2(f) and 12(b) of UGC, Permanently Affiliated to JNTUK, Kakinada.

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. I Sem (OPEN ELECTIVE-I)			
Course Code	FUNDAMENTALS OF UTILIZATION OF ELECTRICAL ENERGY				
Teaching	Total contact hours - 45	L	T	P	C
Prerequisite(s): Power Systems		3	0	0	3

Course Objectives:

The objectives of the course are to make the student learn about

1. To understand selection of drives for industrial application.
2. To understand the heating and welding methods for industrial applications.
3. To understand the concepts of Electrolysis processes and illumination engineering.
4. To identify the various types of Industrial loads
5. To understand electric traction system and drives.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Identify most appropriate heating or welding techniques for suitable applications
CO2:	understand various level of luminosity produced by different illuminating sources
CO3:	Identify a suitable motor for electric drives and industrial applications
CO4:	Identify the various types of Industrial loads
CO5:	Understand electric traction system and drives.

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

UNIT – I

Electric Heating: Advantages and methods of electric heating—Resistance heating, induction heating and dielectric heating.

UNIT – II

Electric Welding: Electric welding—Resistance and arc welding—Electric welding equipment—Comparison between AC and DC Welding

UNIT – III

Illumination Fundamentals: Introduction, terms used in illumination—Laws of illumination—Polar curves—Integrating sphere—Lux meter—Sources of light

Various Illumination Methods: Discharge lamps, MV and SV lamps – Comparison between tungsten filament lamps and fluorescent tubes

UNIT – IV

Selection of Motors: Choice of motor, type of electric drives, starting and running characteristics—Speed control—Temperature rise—Applications of electric drives—Types of industrial loads—continuous—Intermittent and variable loads—Load equalization.

UNIT – V

Electric Traction: System of electric traction and track electrification— Review of existing electric traction systems in India— Special features of traction motor— Mechanics of train movement—Speed–time curves for different services – Trapezoidal and quadrilateral speed time curves.

Text Books:

1. Utilization of Electric Energy – by E. Openshaw Taylor, Orient Longman.
2. Art & Science of Utilization of electrical Energy – by Partab, DhanpatRai& Sons.

Approved by AICTE, Accredited by NAAC 'A+' Grade, Recognized under 2(f) and 12(b) of UGC, Permanently Affiliated to JNTUK, Kakinada
DEPARTMENT OF MECHANICAL ENGINEERING

4 Years B.Tech. (Mechanical Engineering) Course Structure: (2021-22)

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. I Sem (5 th semester)			
Course Code	Robotics (Open Elective-I)				
Teaching	Total contact hours-45	L	T	P	C
Prerequisite(s): Engineering Mathematics		3	0	0	3

Course Objectives:

Students undergoing this course will be able to:

- Acquire the basic knowledge of robots, their autonomy, representation and applications.
- Study various types of drives and end effectors used in the industrial robots.
- To study the principles of various types of sensor and machine vision systems used in robots.
- Understand the forward and inverse kinematics in 2D plane, differential motion, path and trajectory planning.
- Understand the programming of robots, factors affecting the implementation, safety and economics of the robots in industries.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Discuss the fundamentals of robotics, their anatomy, applications in various fields.
CO2:	Summarize various types of drives and end effectors used in the industrial robots.
CO3:	Outline the principles of various types of sensor and machine vision systems used in robots.
CO4:	Explain the forward and inverse kinematics in 2D plane, differential motion, path and trajectory planning.
CO5:	Interpret the programming of robots, factors affecting the implementation, safety and economics of the robots in industries.

Syllabus:

UNIT-I

FUNDAMENTALS OF ROBOT: Robot - Definition - Robot Anatomy - Coordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Applications of robots in various fields. Function line diagram representation of robot arms, common types of arms. Components, number of degrees of freedom.

UNIT-II

ROBOT DRIVE SYSTEMS AND END EFFECTORS: Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers,

Chaitanya Knowledge City, NH-16, Rajahmundry – 533296. East Godavari, AP, India.

DEPARTMENT OF MECHANICAL ENGINEERING

4 Years B.Tech. (Mechanical Engineering) Course Structure: (2021-22)

Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT- III

SENSORS AND MACHINE VISION: Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors – Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors, binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Servoing and Navigation.

UNIT-IV

TWO-DIMENSIONAL KINEMATICS, DYNAMICS AND TRAJECTORY PLANNING: Translation, Rotation, Homogeneous representation, Forward Kinematics, Inverse Kinematics and Difference; Forward kinematics and inverse kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Jacobians, Velocity and Forces-Manipulator Dynamics, Path and Trajectory planning.

UNIT-V

ROBOT PROGRAMMING: Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.

IMPLEMENTATION AND ROBOT ECONOMICS:RGV, AGV; Implementation of Robots in Industries-Variou Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

CourseCode	Microprocessor and Its Interfacing Open Elective				
Teaching	Totalcontacthours-45	L	T	P	C
Prerequisite(s): Knowledge of Computer Architectures and Switching Theory & Logic Design		3	-	-	3

COURSE OBJECTIVES:

The student will be able to

1. Learn 8086 Architecture, Register Organization, Different addressing modes and concepts of Memory Interfacing
2. Understand the basic concepts of 8086 programming and Interfacing.
3. Learn basic concepts of 8086 microprocessor with real world.
4. Learn architecture of AVR Microcontroller, Importance of Bit addressability, function of Special registers and basic concepts of Assembly Language program
5. Learn the concepts of Embedded C Programming and Interfacing of AVR Microcontroller with real world through different device.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1	Understand architectural difference between Microprocessor and Microcontroller and its need for development of products and product development procedure
CO2	Discuss the concepts of programming in Assembly Language
CO3	Apply the concepts of Interfacing of 8086 microprocessor with outside world.
CO4	Understand the architecture of AVR microcontroller
CO5	Analyze concepts of Input/output port Interfacing of microcontroller and apply the concept of interfacing AVR micro controller with outside.

UNIT I

8086 MICROPROCESSORS: Architecture 8086 details and Pin diagrams, register organization of 8086, Signal description of 8086, physical memory organization, general bus operation, I/O addressing capability, Minimum mode, Maximum mode of 8086 system and timings diagrams.

UNIT II

PROGRAMMING WITH 8086 MICROPROCESSOR and*INTERFACING: Addressing mode of 8086, Instruction set of 8086, Assembly language programming, Introduction to stack, stack structure of 8086, interrupts and interrupt service routines, interrupt cycle of 8086, non-maskable interrupt and maskable interrupts, interrupt programming.

UNIT III

8086 INTERFACING

Architecture of 8255, PIO 8255 modes of operation of 8255, Stepper motor interfacing, Seven Segment Display Interfacing, Intel 8259 Priority Interrupt Controller, Intel 8257 DMA

UNIT IV

AVR ARCHITECTURE AND ASSEMBLY LANGUAGE PROGRAMMING: AVR architecture, General Purpose Registers and Special Purpose Registers, Status Registers, Program Counter and Stack Pointer and Stack Memory organization, Addressing Modes, Assembly Language Instruction Set, Delay Calculation and Directives, Bit-Addressability, Look-Up Table and processing, Macros.

UNIT V

Embedded C Programming: Compiler, Cross-Compilers, Intel and Motorola Hex file, Object File, Basics of Embedded C and C data types for AVR, I/O Programming in Embedded C, Delay calculation in Embedded C. LED interfacing and blinking, AVR Serial Port Programming, AVR Interrupt Programming. Interfacing Push-Buttons.

Course Code 201CS504	FOUNDATIONS OF OPERATING SYSTEMS Open Elective-1: CSE, CSE (AI/ML), CSE (Cyber Security)				
Teaching	Total contact hours: 48	L	T	P	C
Prerequisite(s): Computer Organization and Architecture		3	0	0	3

Course Objective(s):

1. To make aware of different types of Operating System and their services.
2. To learn different process scheduling algorithms and synchronization techniques to achieve better performance of a computer system.
3. To know virtual memory concepts.
4. To learn secondary memory management

Course Outcome(s):

After successful completion of this course, a student will be able to-

CO-1: Describe the general architecture of computers

CO-2: Describe, contrast and compare differing structures for operating systems

CO-3: Analyze theory and implementation of processes, resource control (Concurrency etc.), physical and virtual memory, scheduling, I/O and files

CO-4: Illustrate Memory Management Techniques and Page Replacement Algorithms.

CO-5: Demonstrate Mass Storage Structures and Disk structure

UNIT-1

Computer System and Operating System Overview: Overview of computer operating system, operating system structure, operating system operations, protection and security, services, systems call, operating system generation.

UNIT-2

Process Management: Process concept- process scheduling, operations, Process scheduling criteria and algorithms, and their evaluation, Multi Thread programming models, Inter process communication.

UNIT-3

Concurrency: Process synchronization, the critical-section problem, Peterson's Solution, synchronization hardware, semaphores, classic problems of synchronization, monitors.

UNIT-4

Memory Management: Swapping, contiguous memory allocation, paging, structure of the page table, segmentation.

Virtual Memory Management: Virtual memory, demand paging, page-Replacement algorithms, Allocation of Frames, Thrashing

UNIT-5

Mass-Storage Structure: Overview of Mass-storage structure, Disk structure, disk attachment, disk scheduling (FCFS, SCAN, CSCAN, SSTF)

Text Books

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B. Tech. I Sem. (5th Semester)			
Course Code 201PT565	Fundamentals of Petroleum Engineering (Open Elective-I)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisites		3	0	0	3

Course Objectives

The objectives of this course are to

- Impart knowledge on transition from petroleum science to petroleum engineering.
- Explain the role of petroleum engineers in upstream, midstream and downstream sectors.
- Learn the fundamental concepts of upstream, midstream and downstream sectors.
- Impart Knowledge on the transportation of crude oil & its products and natural gas.

Course Outcomes

On Completion of the course, the students will be able to-	
CO1:	Understand overview of petroleum industry.
CO2:	Understand Exploration and Production of petroleum industry
CO3:	Understand Gathering of Oil & Gas and Storage
CO4:	Understand Midstream of petroleum industry
CO5:	Understand Downstream of petroleum industry

Syllabus

UNIT-I

Introduction

Introduction Petroleum Industry- Upstream Sector – Midstream Processing-Downstream Processing- Indian and World Scenario of Petroleum and Natural Gas- Petroleum Trade-Geopolitics.

UNIT II

Upstream Sector-1

Exploration & Production – Indian and World Scenario of Petroleum and Natural Gas Resources. The Reservoir –Reservoir fluids- Hydrocarbon Phase diagrams- Onshore and Offshore Reservoirs – Reservoir Drives.

UNIT III

Upstream Sector-2

Drilling Rigs- Rig Components-Drill and drill bits- Drilling fluids-Well Completions. Production System: Sketches of Well - Well head- Christmas tree and Casing and various other parts-

Cementing-Safety Systems. Subsea Wells: Drilling & Completion and Production. Artificial Lift: Principles and operation of Rod Pumps –Gas Lift –Electrical submersible pumps. Well Workover and Intervention- Well Stimulation. Basic concepts in Matrix Acidizing and Hydro-fracturing.

UNIT-IV

Gathering of Oil & Gas and Storage

Well tubing-Separation of Reservoir Fluids- Manifolds and Gathering – Production Separators – Gas Treatment and Compression - Oil & Gas Storage, Metering and Export.

Midstream Processing

Transportation of Crude Oil & its Products and Natural Gas- - World and Indian pipeline scenario- Safety aspects of pipelines- Environmental issues.

UNIT V

Downstream Processing

Crude Oil Refining: Classification and Composition – Constituents - Products and their specifications– Pre- treatment of crude oil- Refinery distillation- Safety in refinery operations.

Text Book(s)

1. Oil and Gas Production Handbook: An Introduction to Oil & Gas Production, Havard Devold, ABB ATPA Oil and Gas, 2006.
2. Introduction to Petroleum Engineering, John R. Fanchi and Christiansen, R.L., John Wiley & Sons, 2017.

2. Petroleum engineering hand book: Larry .W.lake, SPE, volume II, 2006.
3. Petroleum engineering handbook: Production operations engineering, volume IV, Joe Dunn Clegg, 2009.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B. Tech. I Sem. (5 th Semester)			
Course Code	Elements of Mining Technology (Open Elective-I)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisites: Nil		3	0	0	3

Course Objectives

1. To introduce the concept of different methods of mining.
2. To impart the knowledge of classification of coal seams.
3. To explain the concepts of drilling methods.
4. To impart the knowledge of different explosives and blasting used in mining.
5. To elaborate the concept of latest technologies for mining industry.

Course Outcomes

On Completion of the course, the students will be able to-	
CO1:	Know the various Elements of Mining and stages/phases in Mining
CO2:	Know the concepts of Mining Methods.
CO3:	Know the Drilling methods.
CO4:	Understand the explosives and blasting practice in mines.
CO5:	Understand the application of latest technologies in mining industry

Syllabus**UNIT-I**

Introduction to Mining; Types of Mines, Contribution of Mining activities to civilization; Definitions of terms; Status of Mining Industries in the state and in the country; Stages of Mining – Pre-mining, mining, and post-mining – ancillary mining operations; Types of entries to mineral deposits – Shaft, Incline, Decline, Adit – applicable conditions- limitations, compare shaft vs incline.

UNIT-II

Concepts and Definition of terms commonly used in coal and non-coal mining; Classification of the mineral deposits basing on various factors - shallow, deep, very deep, steeply inclined, moderately inclined, inclined vein, massive deposits. Classification of coal seams - Thick, moderately thick, thin seams, I, II, III-degree gassy seams. Classification of methods of working coal-opencast, underground-Bord and Pillar/ longwall-Advancing and retreating.

UNIT-III

Drilling methods: percussive, rotary, rotary-percussive; Tools used for drilling; Feed mechanism – Screw feed and hydraulic feed mechanism; Mud flushing –sludge and core, Core recovery methods; Reasons for deviation of bore holes. Single tube, double tube and wire line core barrel.

UNIT-IV

Explosives - Uses of explosives in mining industry, characteristics, and classification of explosives – tools, applicability; Initiation of explosives – fuses – safety fuse, cortextfuse. Detonators – types, composition. Different types of blasting practice in mines; Dangers and precaution measures of blasting, Dealing with misfires.

UNIT-V

Applications of Unmanned Aerial Vehicle, Drones, Remote Sensing and Geographical Information System for mining Industry.

Textbook(s)

1. Elements of Mining Technology: Vol-I; D.J. Deshmukh
2. Explosives and Blasting practice; G.K. Pradhan

Reference(s)

AUTOMOBILE ENGINEERING

GRBT20

III Year – I Semester		L	T	P	C
		3	0	0	3
OPEN ELECTIVE-1 BASIC AUTOMOBILE ENGINEERING					

Course Objectives:

To make the student able to

- Categorize working of different automobile structures and layouts.
- Distinguish different types of automobile engines and different components in it.
- Correlate different transmission elements and control systems.
- Distinguish the functions of Control systems.
- Integrate Electric Power train Systems in Automobiles.

Course Outcomes:

On completion of the course, the students will be able to-	
CO1:	Compare different types of automobiles and their components.
CO2:	Differentiate working principles of different types of automobile engines.
CO3:	Illustrate working of different transmission elements and control systems.
CO4:	Demonstrate Automobile Control systems.
CO5:	Illustrate various Eco Friendly Vehicles.

UNIT-I

Introduction to Automobiles:

Functions and characteristics of different types of automobiles and their power sources. Specifications, Performance Parameters, Quality standards, Trends in automobile design.

UNIT-II

Automobile Engines and their Systems:

Engine Specifications with regard to power, speed, torque, no. of cylinders and arrangement, lubrication and cooling etc. Reciprocating Engines, Rotary Engines.

Engine Lubrication systems, Engine cooling system, Engine fuel systems, Engine intake & exhaust systems.

Principles of Ignition system and starting system.

UNIT-III

Transmission Systems:

Clutches, principle of operations, types, cone clutch, single plate clutch, multi plate clutch, magnetic and centrifugal clutches, fluid fly wheel-gear boxes, types, sliding mesh, constant mesh, synchro-mesh gear boxes, over drive, torque converter. Propeller shaft, Torque tube drive, universal joint & slip joint, Hotch-kiss drive, differential rear axles-types-wheels and tyres.

An Autonomous Institution
NBA Accredited & NAAC A*

AUTOMOBILE ENGINEERING

GRBT20

UNIT-IV

Introduction to Control Systems:

Steering geometry-camber, castor, king pin rake, combined angle toe-in, center point steering. Mechanical, hydraulic, pneumatic & vacuum brakes-brief description.

Rigid axle suspension and independent suspension, Shock absorbers, Different types of springs used in automobile suspension.

UNIT-V

Electric & Hybrid Vehicles:

Principles of Battery Electric Vehicles and its Components, Principles of Hybrid Electric Drive Trains and its Architecture.

TEXT BOOKS:

1. Automotive Mechanics, William H Crouse and Donald L Anglin, Tata McGraw – Hill Publishing Co. Ltd. 2004, 10th Edition.

Regulation GRBT20	Godavari Institute of Engineering & Technology (Autonomous)	B.Tech. III – I			
CourseCode	Principles of Management (Common to all Branches)				
Teaching	Total contact hours - 45	L	T	P	C
Prerequisite(s): Basic Knowledge of Business Environment		3	0	0	3

Course Objectives:

- To help the students gain understanding of the functions and responsibilities of managers.
- To provide them tools and techniques to be used in the performance of the managerial job.
- To enable them to analyse and understand the environment of the organization.
- To help the students to develop cognizance of the importance of management principles.

Course Outcomes:

On Completion of the course, the students will be able to-

CO1:	Understand the concepts related to management and different schools of management thoughts.
CO2:	Apply the concepts of planning for effective management.
CO3:	Identify common organizational structures and the advantages and disadvantages
CO4:	Understand the complexities associated with management of human resources in the organizations and integrate the learning in handling these complexities and recognize the importance of employee motivation and how to promote it.
CO5:	Analyze effective application of communication in managerial decisions.

UNIT I

Fundamentals of Management: The concept- meaning, nature and scope, importance of management. principles and functions of management- thoughts of management- managerial roles and skills- levels of management.

(AUTONOMOUS)

Approved by AICTE, Accredited by NBA & NAAC 'A' Grade, Recognized under 2(f) and 12(b) of UGC, Permanently Affiliated to JNTUK, Kakinada.

UNIT II

Planning&Decision Making:Nature and importance of planning- steps in planning process- Types of plans.Types of decisions – steps in decision making process– decision tree analysis – Management by Objective (MBO).

UNIT III

Organizing:Nature and purpose of organizing- Principles of organizing- Organization structures- line and staff organizations - Delegation of authority- span of control-centralization- decentralization of authority.

UNIT IV

Staffing and Coordination: Importance of staffing, recruitment, selection, training and development concepts - factors in selecting lower, middle and upper-level managers.Need for coordination, Principles and techniques of coordination

UNIT V

Motivation ,Communication and Controlling: Motivation- significance of motivation, theories of motivation, Leading-Leadership styles, theories, Communication- process of communication, types of communication, barriers, overcoming barriers to communication, effective communication and its requirements.Importance of controlling, steps in controlling process, requirements of effective control, tools and techniques of control

Regulation GRBT- 20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. I Sem (5 th Semester)			
CourseCode	ELECTRONIC MEASUREMENTS & INSTRUMENTATION (Professional Elective – I)				
Teaching	Total Contact Hours – 50	L	T	P	C
Prerequisites: Knowledge of characteristics of instruments, measurement of physical parameters of transducers, data acquisition and display devices		3	1	-	3

Course Objectives:

1. To understand the static and dynamic characteristics of various instruments.
2. To understand the performance characteristics of various signal generators.
3. To understand the working and features of CRO.
4. To understand different types of AC bridges and transducers.
5. To understand the working principle of data acquisition and display devices.

On Completion of the course, students will be able to	
CO1:	Describe the fundamental concepts and principles of instrumentation.
CO2:	Understand functioning, specification and application of signal analyzing instruments.
CO3:	Apply the measurement techniques for different types of tests.
CO4:	Explain the operation of various instruments required in measurements.
CO5:	Choose specific instruments for specific measurement function.

UNIT- 1 Performance Characteristics of Measuring Instruments

Performance characteristics: Static characteristics, Accuracy, Precision, Resolution, Types of Errors, Dynamic Characteristics, Repeatability, Reproducibility, Fidelity, Lag;

Measuring Instruments: DC Voltmeters, D'Arsonval Movement, DC Current Meters, AC Voltmeters and Current Meters, Ohmmeters, Multimeters, Meter Protection, Extension of Range, True RMS Responding Voltmeters, Specifications of Instruments.

UNIT- 2 Signal Generators and Analyzers

Signal Generators: AF, RF Signal Generators, Sweep Frequency Generators, Pulse and Square wave Generators, Function Generators, Arbitrary waveform Generator.

Signal Analyzers: AF, HF Wave Analyzers, Harmonic Distortion, Heterodyne wave Analyzers, Spectrum Analyzers.

UNIT- 3 Oscilloscopes

Oscilloscopes: CRT, Block Schematic of CRO, Time Base Circuits, Lissajous Figures, CRO Probes, High Frequency CRO Considerations, Delay lines, Applications: Measurement of Time, Period and Frequency.

Special Purpose Oscilloscopes: Dual Trace, Dual Beam CROs, Sampling Oscilloscopes, Storage Oscilloscopes, Digital Storage CROs.

UNIT -4 Transducers

Classification, Strain Gauges, Bounded, unbounded; Force and Displacement Transducers, Resistance Thermometers, Hotwire Anemometers, LVDT, Thermocouples, Synchro's, Special Resistance Thermometers, Piezoelectric Transducers, Magneto Strictive Transducers.

UNIT -5 Bridges

Wheat Stone Bridge, Kelvin Bridge, and Maxwell Bridge. Measurement of Physical Parameters: Flow Measurement, Displacement Meters, Liquid level Measurement, Measurement of Humidity and Moisture, Velocity, Pressure - High Pressure, Vacuum level, Temperature - Measurements, Data Acquisition Systems.

1. Electronic instrumentation, second edition - H.S.Kalsi, Tata McGraw Hill, 2004.

Prerequisite(s): Knowledge of Classification of Signals and Systems, Basic Eletrical machines.		3	-	-	3

CONTROL SYSTEMS

Course objectives

- To introduce the concepts of open loop and closed loop systems, mathematical models of mechanical and electrical systems, and concepts of feedback.
- To study the characteristics of the given system in terms of the transfer function and introducing various approaches to reduce the overall system for necessary analysis .
- To analyze the system in terms of absolute stability and relative stability by different approaches.
- To design different control systems for different applications as per given specifications.
- To introduce the concepts of state variable analysis, design and also the concepts of controllability and observability.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1	This course introduces the concepts of feedback and its advantages to various control systems.
CO2	The performance metrics to design the control system in time-domain and frequency domain are introduced
CO3	Understand the Concept of stability and different analysis.
CO4	Control systems for various applications can be designed using in timedomain and frequency domain analysis
CO5	In addition to the conventional approach, the state space approach for the analysis of control systems is also introduced

UNIT-I Mathematical Modelling of Control Systems

Introduction of Control System, Open Loop Control System, Closed loop Control System, Different Examples Mathematical models of Physical Systems Differential equations of physical systems, Transfer functions, Block diagram Algebra, Signal flow graphs with illustrative examples Effects of Feedback Feedback Characteristics and its advantages, Linearizing effect of feedback

UNIT-II Time Response Analysis

Standard test Signals, Time response of first and second order systems, steady state errors and error constants, Effect of adding a zero to a system, Design specifications of second order systems, Performance indices

UNIT-III Stability and Root Locus

Concepts of Stability and Algebraic Criteria The concept of Stability, Necessary Conditions for Stability, Routh-Hurwitz Stability Criterion, Relative stability analysis, The Root Locus Technique Introduction, The Root Locus concepts, Construction of Root Loci.

UNIT-IV Frequency Response Analysis

Introduction, Correlation between time and frequency response, Bode diagrams, Polar Plots, Nyquist Plots, Determination of Phase Margin and Gain margin Nyquist Stability Criterion. Introduction to Design The design problem, Preliminary consideration of classical design, Realization of basic Compensators, Cascade compensation in time domain and frequency domain, Tuning of PID Controllers

UNIT-V State Space Analysis of Continuous Systems

State Variable Analysis and Design Introduction, Concepts of State, State Variables and State models, State models for linear continuous-time systems, State variables and linear discrete-time systems, Solution of state equations and Concepts of Controllability and Observability.

CourseCode	COMUTER ARCHITECTURE & ORGANIZATION (Professional Elective-1)				
Teaching	Total Contact Hours – 50	L	T	P	C
Prerequisites: Knowledge of Logic Design, Basic computing, Architectural features of Computer, Processing, Memory and I/Organization		3	-	-	3

Course Objectives:

1. To understand computer architecture and its organization with operating system functionality
2. To understand central processing unit functionality with micro programmed and hardwired controlling concepts.
3. To familiarize input-output interfacing techniques in computer architecture.
4. To develop design logics of control circuits and arithmetic circuits.
5. To understand pipelining concepts in processor for improving computational speed.

On Completion of the course, students will be able to	
CO1:	Learn Basic operational concepts, computer arithmetic operations and Register Transfer language.
CO2:	Learn the concept of central processing unit, micro programmed control and hard-wired control
CO3:	Learn the concept of Memory management hardware, Input-Output Interface and Input-Output Processor
CO4:	Apply digital logic concepts to design computer arithmetic circuits and control logic circuits
CO5:	Learn the concept of Pipelining

UNIT-1 Basic Structure of Computers and Data Representations

Computertypes,functionalunits,basicoperationalconcepts,busstructures,softwareperformance,multiprocessors and multi computers, Data types, complements, data representation, Fixed point representation, Floating – point representations, Concepts of Operating Systems and Applicationsoftware.

UNIT-2 Register Transfer Language and Micro Operations

RegisterTransferlanguage,RegisterTransfer,Busandmemorytransfer,ArithmeticMicro-

operations, logic micro operations, shift micro-operations, Arithmetic logic shift unit, Instruction codes, Computer Registers, Computer instructions–Instruction cycle, Memory Reference Instructions, Input- Output Instructions and Interrupts.

UNIT–3 Central Processing Unit and Micro Programmed Control

Stack organization, Instruction formats, Addressing modes, Data transfer and manipulation, Program control, Control memory, Address sequencing, Micro program example, Design of control unit-Hard wired control, Micro programmed control.

UNIT–4 Memory System and Input – Output Organization

Memory organization-RAM, ROM, Memory Hierarchy, Main memory, Auxiliary memory, Associative memory, Cachememory, CacheCoherence, Virtualmemory, PeripheralDevices, Input-OutputInterface, Asynchronousdata transfer Modes, Priority Interrupt, Direct memory Access, Input–Output Processor (IOP), Serialcommunication.

UNIT–5 Computer Arithmetic and Pipeline

Addition and subtraction, multiplication algorithms, division algorithms, floating point arithmetic operations. Decimal arithmetic unit, Decimal arithmetic operations, Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline.

Course Code	ARTIFICIAL NEURAL NETWORKS <i>(Professional Elective -I)</i>				
Teaching	Total Contact Hours - 50	L	T	P	C
Prerequisites: .. KNOWLEDGE OF Neural Networks		3	0	-	3

Course Objectives:

1. To understand the biological neural network and to model equivalent neuron models.
2. To understand the architecture, learning algorithms
3. To know the issues of various feed forward and feedback neural networks.
4. To explore the Neuro dynamic models for various problems.

On Completion of the course, students will be able to	
CO1:	Upon completing this course, the student will be able to
CO2:	Understand the similarity of Biological networks and Neural networks
CO3:	Perform the training of neural networks using various learning rules.
CO4:	Understanding the concepts of forward and backward propagations.
CO5:	Understand and Construct the Hopfield models

UNIT-1

Introduction: A Neural Network, Human Brain, Models of a Neuron, Neural Networks viewed as Directed Graphs, Network Architectures, Knowledge Representation, Artificial Intelligence and Neural Networks
 Learning Process: Error Correction Learning, Memory Based Learning, Hebbian Learning, Competitive, Boltzmann Learning, Credit Assignment Problem, Memory, Adaption, Statistical Nature of the Learning Process

UNIT-2

Single Layer Perceptrons: Adaptive Filtering Problem, Unconstrained Organization Techniques, Linear Least Square Filters, Least Mean Square Algorithm, Learning Curves, Learning Rate Annealing Techniques, Perceptron –Convergence Theorem, Relation Between Perceptron and Bayes Classifier for a Gaussian Environment
Multilayer Perceptron: Back Propagation Algorithm XOR Problem, Heuristics, Output Representation and Decision Rule, Computer Experiment, Feature Detection

UNIT-3

Back Propagation: Back Propagation and Differentiation, Hessian Matrix, Generalization, Cross Validation, Network Pruning Techniques, Virtues and Limitations of Back Propagation Learning, Accelerated Convergence, Supervised Learning

UNIT-4

Self-Organization Maps (SOM): Two Basic Feature Mapping Models, Self-Organization Map, SOM Algorithm, Properties of Feature Map, Computer Simulations, Learning Vector Quantization, Adaptive Pattern Classification

UNIT-5:

Neuro Dynamics: Dynamical Systems, Stability of Equilibrium States, Attractors, Neuro Dynamical Models, Manipulation of Attractors as a Recurrent Network Paradigm
Hopfield Models – Hopfield Models, restricted Boltzmann machine.

CourseCode	LINEAR AND DIGITAL ICAPPLICATIONS LAB				
Teaching	Total Contact Hours – 36	L	T	P	C
Prerequisites: Basic Knowledge of Electronic Devices and Circuits&Pulse and Digital Circuits, Switching theory and logic design.		0	0	3	1.5

Course Objectives:

1. To understand the basics of operational amplifier and its various applications.
2. To design Amplifiers, Active Filters and Oscillators using IC's.
3. To design and draw the internal structure of the digital integrated circuits.
4. To design basic digital building blocks such as multiplexers, selectors, and shift registers.

On Completion of the course, students will be able to	
CO1:	Design and implementation of Filter circuits using IC 741
CO2:	Analyze the functionality of Multivibrator circuits using IC 555
CO3:	Design and implementation of Oscillator circuits using IC 741
CO4:	Design basic digital building blocks such as multiplexers, selectors, and shift registers.
CO5:	Specify digital circuit timing: setup and hold times and logic propagation delays.

List of experiments

LINEAR IC EXPERIMENTS:

1. OPAMP application-Adder, Subtractor, Comparator Circuits
2. Integrator and Differentiator Circuits using IC741
3. Active Filters Applications-LPF, HPF(first order)
4. IC 741 Oscillator Circuits-Phase shifting and Wien Bridge Oscillator
5. Function Generator using OPAMP's
6. IC 555 Timers- Monostable and Astable Operation Circuit.
7. Schmitt Trigger Circuit-using IC741
8. IC 565- PLL Applications.

DIGITAL IC EXPERIMENTS

1. Decoders -74138

2. Multiplexer-74151 & 2x1 De-multiplexer-

74155. Bit Comparator-7485

4. Flip-Flop IC's-7474, 7476

5. IC Counter -7490 & 7493

6. Shift Register -7495

7. RAM (74189) and ALU

Teaching	Totalcontacthours-36	L	T	P	C
Prerequisite(s): Knowledge of Digital modulation and demodulation techniques , Information theory and coding and MATLAB.		-	-	3	1.5

Course Objective:

1. Implementation of different digital modulation and demodulation using hardware & MATLAB.
2. Implementation of different Multiplexing methods.
3. Comparison of different modulation techniques.
4. Implementation of source coding using hardware.
5. Implementation the channel coding using hardware.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Implement different digital modulation and demodulation techniques.
CO2:	Analyze the performance of different multiplexing schemes.
CO3:	Analyze the performance of different modulation schemes.
CO4:	Analyze the performance of different source coding schemes.
CO5:	Analyze the performance of different channel coding schemes.

Syllabus:

List of Experiments:

Minimum Twelve Experiments to be conducted:

1. Time division multiplexing.
2. Pulse code modulation.
3. Differential pulse code modulation.
4. Delta modulation.
5. Frequency shift keying.
6. Phase shift keying.
7. Differential phase shift keying.

CourseCode	Analog & Digital Circuit Design using MULTISIM (ECE)				
Teaching	Total contact hours-36	L	T	P	C
Prerequisite(s): Knowledge of Analog and Digital circuit, MULTISIM		-	-	3	1.5

Course Objective

1. To analyze functioning of Multisim software.
2. To analyze diode and rectifier circuits.
3. To analyze single stage, double stage, feedback amplifier and oscillatory circuit.
4. To analyze digital logic gates.
5. To apply solutions to problems in designing analog and digital circuits

Course Outcomes:

On completion of Course, student will be able to	
CO1:	Understand the Multisim user interface
CO2:	Use Multisim to capture circuit schematics
CO3:	Understand the design of analog circuits.
CO4:	Understand the design of digital circuits.
CO5:	Apply modular design with sub-circuits and multi-page designs

Syllabus:

List of Experiments:

Part-A-:

1. Study of PN junction characteristics.
2. Design and Simulation of Half wave and full wave rectifier.
3. Design and Simulation of single stage CE amplifier using BJT.
4. Design and Simulation of 2 stage RC Coupled Amplifier.
5. Design and Simulation of RC phase shift Oscillator.
6. Design and Simulation of Hartley/Colpitts/Wein bridge Oscillator.
7. Design and Simulation of voltage-series feedback amplifier.

8. Design and Simulation of basic & Universal gates.
9. Design and Simulation of FlipFlops.
10. Design and Simulation of CMOS inverter

Part-B-:

1. Design and simulation of cascode amplifier.
2. Design and simulation of Darlington pair amplifier.
3. Design and simulation of Multivibrator.
4. Design and simulation of Schmidt trigger circuit.
5. Design and simulation of Master-Slave flipflop.

Course Code	MICROPROCESSORS AND MICROCONTROLLERS				
Teaching	Total Contact Hours - 50	L	T	P	C
Prerequisites: Knowledge of Logic Gates, Registers, Counters, Memory, C programming, Interfacing concepts		3	1	-	3

Course Objectives:

1. To understand Microprocessor (8086) & Microcontroller (AVR) architecture.
2. To develop methods for memory interfacing and accessing.
3. To familiarize with Embedded-C programming concepts and IDE tools.
4. To develop various on-chip and off-chip devices interfacing concepts.
5. To familiarize with various serial and parallel communication methods.

On Completion of the course, students will be able to	
CO1:	Learn architectural difference between Microprocessor and Microcontroller and its need for development of products and product development procedure.
CO2:	Learn of RAM and ROM memory interfacing concepts and address calculations
CO3:	Apply concepts of programming in Assembly Language and Embedded C programming
CO4:	Analyze the concepts of Input / Output port Interfacing of microcontroller.
CO5:	Apply concepts of serial and parallel communication methods to various sensors

UNIT-1 8086 Microprocessors

Introduction, register organization of 8086, Architecture of 8086, Pin diagram and Signal description of 8086, Physical memory organization, general bus operation, I/O addressing capability, Minimum mode and Maximum mode of 8086 system and timings diagrams, Semiconductor memory (RAM and ROM) interfacing.

S. No.	Course Type	Course Title	Periods per week			C	Scheme of Examination Maximum Marks		
			L	T	P		Int.	Ext.	Total
1	PC	Microprocessors and Microcontrollers	3	1	0	3	30	70	100
2	PC	Digital Signal Processing	3	1	0	3	30	70	100
3	PC	Microwave & Optical Communication Engineering	3	1	0	3	30	70	100
4	OE	Open Elective – 2	3	1	0	3	30	70	100
5	PE	Professional Elective-2 Radar Engineering Mobile & Cellular Communication Digital Image Processing VLSI Design	3	1	0	3	30	70	100
6	PC	Microwave & Optical Communication Engineering Lab	0	0	3	1.5	50	50	100
7	PC	Microprocessors and Microcontrollers Lab	0	0	3	1.5	50	50	100
8	PC	Digital Signal Processing Lab	0	0	3	1.5	50	50	100
9	SAC	ARM based / Arduino based Programming	0	1	2	2	-	50	50
10	MC	IPR and Patents	2	0	0	-	30	70	100
TOTAL						21.5	330	620	950
Honors /Minor courses (The hours distribution can be 3-0-2 or 3-1-0 also)			4	0	0	4			
Internship (Mandatory) 2 Months during summer vacation									

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th Semester)			
Course Code	MICROPROCESSORS AND MICROCONTROLLERS				
Teaching	Total Contact Hours - 50	L	T	P	C
Prerequisites: Knowledge of Logic Gates, Registers, Counters, Memory, C programming, Interfacing concepts		3	1	-	3

Course Objectives:

1. To understand Microprocessor (8086) & Microcontroller (AVR) architecture.
2. To develop methods for memory interfacing and accessing.
3. To familiarize with Embedded-C programming concepts and IDE tools.
4. To develop various on-chip and off-chip devices interfacing concepts.
5. To familiarize with various serial and parallel communication methods.

On Completion of the course, students will be able to	
CO1:	Learn architectural difference between Microprocessor and Microcontroller and its need for development of products and product development procedure.
CO2:	Learn of RAM and ROM memory interfacing concepts and address calculations
CO3:	Apply concepts of programming in Assembly Language and Embedded C programming
CO4:	Analyze the concepts of Input / Output port Interfacing of microcontroller.
CO5:	Apply concepts of serial and parallel communication methods to various sensors

UNIT-1 8086 Microprocessors

Introduction, register organization of 8086, Architecture of 8086, Pin diagram and Signal description of 8086, Physical memory organization, general bus operation, I/O addressing capability, Minimum mode and Maximum mode of 8086 system and timings diagrams, Semiconductor memory (RAM and ROM) interfacing.

UNIT – 2 Programming with 8086 and Interfacing

Addressing modes, Instruction set, Assembly language programming, Introduction to stack, Stack structure of 8086, Interrupts and interrupt service routines, Interrupt cycle of 8086, non-maskable interrupt and Maskable interrupts, Architecture of 8255, Modes of operation of 8255, Stepper motor interfacing, Seven Segment Display Interfacing.

UNIT – 3 AVR Architecture and Assembly Programming

AVR architecture, General Purpose Registers and Special Purpose Registers, Status Registers, Program Counter, Stack Pointer and Stack Memory organization, Addressing Modes, Assembly Language Instruction Set, Delay Calculation and Directives, Bit-Addressability, Look-Up Table and processing, Macros.

UNIT – 4 Embedded C Programming

Compiler, Cross-Compilers, Intel and Motorola Hex file, Object File, Basics of Embedded C and C data types for AVR, I/O Programming in Embedded C, Delay calculation in Embedded C, LED interfacing and blinking.

UNIT-5 Interfacing AVR with External Peripherals

Interfacing Push-Buttons, Interfacing Key matrix, Seven Segment Display Interfacing, LCD Interfacing, Relay Interfacing, Temperature (LM35) Sensor Interfacing, DC motor Interfacing, Stepper Motor Interfacing, ADC & DAC Interfacing, AVR Timer Programming, AVR Interrupt Programming, AVR Serial Port Programming.

Regulation GRBT- 20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th Semester)			
CourseCode	DIGITAL SIGNAL PROCESSING				
	Total Contact Hours - 50	L	T	P	C
Prerequisites: Signals and Systems		3	4	-	3

Course Objectives:

1. To develop a thorough understanding of the central elements of discrete time signal processing theory and the ability to apply this theory to real-world signal processing applications.
2. To use z-transforms and discrete time Fourier transforms to analyze a digital system.
3. To understand the discrete Fourier transform (DFT), its applications and its implementation by FFT techniques.
4. To design and understand finite & infinite impulse response filters for various applications.
5. To understand the principles and concepts of multirate signal processing.

On Completion of the course, students will be able to	
CO1:	Interpret, represent and process discrete/digital signals and systems.
CO2:	Understand frequency domain analysis of discrete time signals and systems using DTFT, DFT and FFT.
CO3:	Design and implement FIR and IIR filters using different methods, and how to test, analyze and refine design.
CO4:	Realize the basic structures of FIR and IIR systems.
CO5:	Acquire the basics of multi rate digital signal processing.

UNIT – 1

INTRODUCTION: Introduction to Digital Signal Processing: Discrete time signals & sequences, Classification of Discrete time systems, stability of LTI systems, Invertability, Response of LTI systems to arbitrary inputs. Solution of Linear constant coefficient difference equations, Frequency domain representation of discrete time signals and systems,

Review of Z-transforms, solution of difference equations using Z-transforms, System function.

UNIT II

DISCRETE FOURIER SERIES & FOURIER TRANSFORMS: Properties of discrete Fourier series, DFS representation of periodic sequences, Discrete Fourier transforms: Properties of DFT, linear filtering methods based on DFT, Fast Fourier transforms (FFT) - Radix-2 decimation in time and decimation in frequency FFT Algorithms, Inverse FFT.

UNIT III

DESIGN OF IIR DIGITAL FILTERS & REALIZATIONS: Analog filter approximations – Butter worth and Chebyshev, Design of IIR Digital filters from analog filters, Design Examples, Analog and Digital frequency transformations. Basic structures of IIR systems, Transposed forms.

UNIT IV

DESIGN OF FIR DIGITAL FILTERS & REALIZATIONS: Characteristics of FIR Digital Filters, frequency response. Design of FIR Digital Filters using Window Techniques and Frequency Sampling technique, Comparison of IIR & FIR filters, Basic structures of FIR systems, Lattice structures, Lattice-ladder structures

UNIT V

MULTIRATE SIGNAL PROCESSING

Introduction, Decimation, Interpolation, Sampling rate conversion, Implementation of sampling rate conversion and its applications.

Text Books:

1. Discrete Time Signal Processing: A.V. Oppenheim and Ronald W. Schafer, PHI 4th Edition, 2017.
2. Digital Signal Processing, Principles, Algorithms, and Applications: John G. Proakis and Dimitris G. Manolakis, Pearson Education, PHI, 2013.
3. Digital Signal Processing: Andreas Antoniou, TATA McGraw Hill, 2006.

Regulation GRBT- 20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th Semester)			
CourseCode	Microwave & Optical Communication Engineering				
Teaching	Total Contact Hours - 50	L	T	P	C
Prerequisites EMwaves & Transmission lines		3	0	-	3

Course Objectives:

1. To understand fundamentals of rectangular waveguides and circular waveguides through electromagnetic field analysis.
2. To understand the waveguide components and multiport junction concept.
3. To understand the working principle and characteristics of microwave tubes.
4. To understand the M-type tubes with their characteristics.
5. To understand the function, design, and integration of the major microwave components like oscillator, modulator in building a Microwave test bench setup for measurements.

On Completion of the course, students will be able to	
CO1:	Apply electromagnetic theory regarding Rectangular and circular waveguides.
CO2:	Apply the concept to multiport junction to calculate the scattering parameters.
CO3:	Analyse the types of microwave tubes.
CO4:	Distinguish between M-type and O-type tubes and modern tools.
CO5:	Analyse and measure microwave parameters using microwave bench.

UNIT – 1 Microwave Transmission Lines

Introduction, Microwave Spectrum and Bands, Applications of Microwaves, Rectangular Waveguides – TE/TM mode analysis, Expressions for Fields, Characteristic Equation and Cut-off Frequencies, Dominant and Degenerate Modes, Sketches of TE and TM mode fields in the cross section, Mode Characteristics – Phase and Group Velocities, Wavelengths and Impedance Relations; Power Transmission and Power Losses in Rectangular Guide, Impossibility of TEM mode.

UNIT – 2 Waveguide Components and Applications

Circular waveguides- Introduction, Characteristic Equation, Dominant and Degenerate Modes. Microstrip Lines– Introduction, Z_0 Relations, Effective Dielectric Constant, Losses, Q factor Cavity Resonators–Types, Resonant Frequencies, Q factor and Coupling

Coefficients, Related Problems. S-Matrix Calculations for Two-port Junction, E-plane and H-plane Tees, Magic Tee.

UNIT – 3 Microwave Tubes

Reflex Klystrons – Structure, Applegate Diagram and Principle of working, Mathematical Theory of Bunching, Power Output, Efficiency, Electronic Admittance; Oscillating Modes and o/p Characteristics, Electronic and Mechanical Tuning, Related Problems.

UNIT – 4 Helix TWTs

Significance, Types and Characteristics of Slow Wave Structures; Structure of TWT and Suppression of Oscillations, Nature of the four Propagation Constants.

M-type Tubes- Introduction, Cross-field effects, Magnetrons – Different Types, 8-Cavity Cylindrical Travelling Wave. Magnetron – Hull Cut-off and Hartree Conditions, Modes of Resonance and PI-Mode Operation

UNIT – 5 Introduction to Optical Fiber Communication

Optical fiber wave guides- Introduction, Ray theory transmission, Total Internal Reflection, Acceptance angle, Numerical Aperture, Skew rays, Cylindrical fibers- Modes, V-number, Mode coupling, Step Index fibers, Graded Index fibers, Single mode fibers- Cut off wavelength, Mode Field Diameter, Effective Refractive Index, Related problems

Fiber Characteristics: Signal distortion in optical fibers-Attenuation, Absorption, Scattering and Bending losses, Core and Cladding losses, Information capacity determination, Group delay.

Text books:

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th semester)			
Course Code	SOLID WASTE MANAGEMENT (Open Elective-II)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisite(s): Basics of Waste and Environmental Engineering		3	0	0	3

Course Objective:

- To impart the knowledge the methods of collection and optimization of collection routing of municipal solid waste.*
- To acquire the principles of treatment of municipal solid waste*
- To know the impact of solid waste on the health of the living beings*
- To learn the criterion for selection of landfill and its design*
- To plan the methods of processing such as composting the municipal organic waste.*

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1	Understand the Objects of Solid waste management
CO2	Understand the elements of Solid waste management
CO3	Design the Transportation facility in Solid waste management
CO4	Characterise the solid waste and design a composting facility
CO5	Know the criteria for selection of landfill

Syllabus:**Unit – I**

Introduction to Solid Waste Management: Goals and objectives of solid waste management, Classification of Solid Waste - Factors Influencing generation of solid waste - sampling and characterization - Future changes in waste composition, major legislation, monitoring responsibilities.

Unit – II

Basic Elements in Solid Waste Management: Elements and their inter relationship – principles of solid waste management- onsite handling, storage and processing of solid waste
Collection of Solid Waste: Type and methods of waste collection systems, analysis of collection system - optimization of collection routes– alternative techniques for collection system.

Unit – III

Transfer and Transport: Need for transfer operation, compaction of solid waste - transport means and methods, transfer station types and design requirements.

Separation and Transformation of Solid Waste: unit operations used for separation and transformation: shredding - materials separation and recovery, source reduction and waste minimization.

Unit – IV

Processing and Treatment: Processing of solid waste – Waste transformation through combustion and composting, anaerobic methods for materials recovery and treatment – Energy

recovery – biogas generation and cleaning– Incinerators.

Unit – V

Disposal of Solid Waste: Methods of Disposal, Landfills: Site selection, design and operation, drainage and leachate collection systems –designated waste landfill remediation.

GODAVARI INSTITUTE OF ENGINEERING & TECHNOLOGY

GRBT-20

(AUTONOMOUS)

Approved by AICTE, Accredited by NBA & NAAC 'A' Grade, Recognized under 2(f) and 12(b) of UGC, Permanently Affiliated to JNTUK, Kakinada.

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (OPEN ELECTIVE- II)			
Course Code	CONCEPTS OF POWER SYSTEM ENGINEERING				
Teaching	Total contact hours - 45	L	T	P	C
Prerequisite(s): Basic Science		3	0	0	3

Course Objectives:

The objectives of the course are to make the student learn about

1. To understand about hydro-electric power plants
2. To understand about Thermal power plants
3. To understand about Nuclear power plants
4. To understand about Solar Photovoltaic Systems
5. To understand about Biomass

Course Outcomes:

After successful completion of the course, a successful student will be able to-	
CO1:	Understand about hydro-electric power plants
CO2:	Understand about Thermal power plants
CO3:	Understand about Nuclear power plants
CO4:	Understand about Solar Photovoltaic Systems
CO5:	Understand about Biomass

UNIT-I

Hydroelectric Power Stations:

Selection of site, general layout of a hydroelectric power plant with brief description of major components and principle of operation

UNIT-II

Thermal Power Stations

Layout of a thermal power plant, path of coal, steam, water, air, ash and flue gasses, ash handling system- Description of components.

Introduction transmission lines: Short, medium and long transmission lines.

UNIT-III

Nuclear Power Stations

Nuclear fission- Nuclear fuels, chain reaction- Nuclear reactor Components: Moderators, Control rods, Reflectors and Coolants. Types of Nuclear reactors - description of PWR, BWR and FBR.

UNIT-IV

Solar Photovoltaic Systems: Balance of systems – IV characteristics – System design: storage sizing – PV system sizing.

UNIT-V

Biomass Energy: Basic concepts, properties and types, biomass conversion, biofuels, advantages and disadvantages.

DEPARTMENT OF MECHANICAL ENGINEERING

4 Years B.Tech. (Mechanical Engineering) Course Structure: (2021-22)

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B. Tech. II Sem. (6 th Semester)			
Course Code	Introduction to MEMS (Open Elective-II)				
Teaching	Total contact hours-45	L	T	P	C
Prerequisite(s):	Engineering Physics.	3	0	0	3

Course Objectives:

Students undergoing this course will be able to:

- Understand the operation of major classes of MEMS sensors and actuators.
- Familiarize with the principles and concepts related to the micro electro mechanical systems.
- Learn the required properties of a material used for fabrication of micro systems.
- Learn the fundamentals of standard micro fabrication techniques and processes.
- Understand the unique demands, environments and applications of MEMS devices.

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Discuss the principles and various steps of different micro machining and fabrication techniques.
CO2:	Explain the working principle and fabrication methods of Micro mechanical sensors and actuators.
CO3:	Describe the working principles and construction of various thermal sensor and actuators.
CO4:	Discuss the working principles and fabrication techniques of Magnetic sensors and actuators, and MOEMS devices.
CO5:	Identify different micro fluid actuation techniques and explain the working and construction of BioMEMS devices.

Syllabus

UNIT – I

INTRODUCTION: Definition of MEMS, MEMS history and development – micro machining – lithography principles & methods, photolithography – structural and sacrificial materials, thin film deposition – impurity doping – etching – surface micro machining – wafer bonding – LIGA.

UNIT – II

MICRO MECHANICAL SENSORS AND ACTUATORS: Principles of sensing and actuation, beam and cantilever, capacitive sensors, piezo-electric sensors and actuators – measurement of strain, pressure and flow, pressure measurement by micro phone – MEMS gyroscopes, shear mode piezo actuator, gripping piezo actuator, Inchworm technology.

GODAVARI INSTITUTE OF ENGINEERING & TECHNOLOGY

(AUTONOMOUS)

Approved by AICTE, Accredited by NAAC 'A+' Grade, Recognized under 2(f) and 12(b) of UGC, Permanently Affiliated to JNTUK, Kakinada
DEPARTMENT OF MECHANICAL ENGINEERING

4 Years B.Tech. (Mechanical Engineering) Course Structure: (2021-22)

UNIT – III

THERMAL SENSORS AND ACTUATORS: Thermal energy basics and heat transfer processes, – thermistors, thermo devices – thermo couple, micro machined thermo couple probe – Peltier effect heat pumps – thermal flow sensors – micro hot plate gas sensors – MEMS thermo vessels – pyro electricity – shape memory alloys (SMA), – U-shaped horizontal and vertical electro thermal actuator – thermally activated MEMS relay – micro spring thermal actuator – data storage cantilever.

UNIT – IV

MAGNETIC SENSORS AND ACTUATORS: Magnetic materials for MEMS and properties – magnetic sensing and detection – magneto resistive sensor, Hall Effect – magneto diodes, magneto transistor – MEMS magnetic sensor – magnetic probe based storage device.

MICRO-OPTO-ELECTRO MECHANICAL SYSTEMS: Principle of MOEMS technology – properties of light – light modulators, beam splitter, micro lens, micro mirrors – digital micro mirror device (DMD) – light detectors – grating light valve (GLV) – optical switch

UNIT – V

MICRO FLUIDIC SYSTEMS: Applications – considerations on micro scale fluid – fluid actuation methods. Dielectrophoresis (DEP), Electro wetting, Electro thermal flow, thermo capillary effect, electro osmosis flow, Opto-electro wetting (OEW) – typical micro fluidic channel, – microfluid dispenser – micro needle – molecular gate – micro pumps.

CHEMICAL AND BIO MEDICAL MICRO SYSTEMS: Sensing mechanism & principle – membrane-transducer materials – chem.-lab-on-a-chip (CLOC) – chemoresistors, chemocapacitors – electronic nose (E-nose) – mass sensitive chemosensors

Course Code	INTERNET OF THINGS AND IT'S APPLICATIONS Open Elective				
Teaching	Totalcontacthours-45	L	T	P	C
Prerequisites: Knowledge of Logic Gates, Relays, Registers, Counter, Sensors, Microprocessors, Microcontrollers, Serial & Parallel communication		3	-	-	3

Course Objectives:

1. To understand the basic concepts of Internet of things
2. To develop understanding with layered Wired and Wireless protocols.
3. To develop understanding with Arduino board and Arduino IDE.
4. To develop understanding with Data analytics and supporting services.
5. To develop understanding with Big data services and Sensors.

Course Outcomes:

On Completion of the course, the students will be able to	
CO1:	Learn the Architecture of iot, Sensors, Actuators, ARM processors.
CO2:	Learn the various Communication protocols present in a network.
CO3:	Apply the practical knowledge to Arduino board
CO4:	Analyze the Machine learning and various network services.
CO5:	Learn the importance of Big data and Virtualization concepts.

UNIT – 1 FUNDAMENTALS OF IOT

Evolution of Internet of Things, Enabling Technologies, IoT Architectures, oneM2M, IoT World Forum (IoTWF) and Alternative IoT models, Simplified IoT Architecture and Core IoT Functional Stack, Fog, Edge and Cloud in IoT, Functional blocks of an IoT ecosystem, Sensors, Actuators, & Smart Objects .

IoT Platform overview: Overview of IoT supported Hardware platforms such as: ARM Cortex Processors, Arduino and Intel Galileo boards.

UNIT – 2 IOT COMMUNICATION PROTOCOLS

Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 802.11ah and Lora WAN, Network Layer: IP versions, Constrained Nodes and Constrained Networks, Application Transport Methods: Supervisory Control and Data Acquisition, Application Layer Protocols: CoAP and MQTT.

UNIT – 3 DESIGN AND DEVELOPMENT ENVIRONMENT

Design Methodology, Embedded computing logic, Microcontroller, System on Chips, IoT system building blocks, Arduino, Nodemcu Board details, IDE programming.

UNIT – 4 DATA ANALYTICS AND SERVICES

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest, Role of Machine Learning — No SQL Databases, Hadoop Ecosystem, Apache Kafka, Apache Spark, Edge Streaming Analytics, Xively Cloud for IoT, Python Web Application.

UNIT – 5 CASE STUDIES / INDUSTRIAL APPLICATIONS

IoT applications in home, Agriculture 3.0, buildings, security, Industries, Home appliances, other IoT electronic equipments. Use of Big Data and Visualization in IoT.

Regulation GRBT-20	GODAVARI INSTITUTE OF ENGINEERING & TECHNOLOGY (Autonomous)	IIIB.Tech II Semester			
Course Code 201CS604	FUNDAMENTALS OF DATABASES Open Elective-II: CSE, CSE (AI/ML), CSE (Cyber Security)				
Teaching	Total contact hours: 48	L	T	P	C
Prerequisite(s):---Basic knowledge of Data structures, Proportional logic		3	0	0	3

Course Objective(s):

1. To impart students with theoretical knowledge of databases and database management systems in information technology applications.
2. To instruct the student with practical skills in the use of databases and database management systems
3. To apprehend the logical design, physical design and implementation of relational databases are covered.

Course Outcome(s):

After successful completion of this course, a student will be able to-

CO-1: Obtain the knowledge about Database Management System

CO-2: Accord a description of the Database Management structure and comprehend the applications of Databases.

CO-3: Realize the advantages and disadvantages of the different models.

CO-4: Perceive the constraints and controversies associated with relational database.

CO-5: Explain the concept of data planning and Database design and Identify the various functions of Database Administrator

UNIT-1

Introduction: Data base System Applications, data base System VS file System, Advantages of a DBMS View of Data, Data Abstraction, instances and Schemas, data Models, the ER Model, Relational Model, Other Models, Database Languages: DDL, DML, DCL.

UNIT-2

ER Model: Data base design and ER diagrams, Beyond ER Design Entities, Attributes and Entity sets, Relationships and Relationship sets, Additional features of ER Model, Concept Design with the ER Model.

UNIT-3

Basic SQL Query: Basic SQL querying (select and project) using where clause, arithmetic & logical operations, Set, Comparison Operators, NULL values, Comparison using Null values, sub queries, grouping, aggregation, ordering, implementation of different types of joins.

UNIT-4

SQL and PL/SQL: Creating tables with relationship, implementation of key and integrity constraints, views. Introduction to PL/SQL

Schema Refinement (Normalization): Purpose of Normalization or schema refinement, concept of functional dependency, normal forms based on functional dependency (1NF, 2NF and 3NF).

Unit-5

Introduction to NoSQL: NoSQL Data Model Design, Feature Set, areas of applicability, Types of NoSQL – Key-Value, Document Type, Graph based

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B. Tech. II Sem.(6 th Semester)			
Course Code 201PT665	Basic Concepts in Petroleum Drilling Engineering (Open Elective-II)				
Teaching	Total contact hours-48	L	T	P	C
Prerequisites		3	0	0	3

Course Objectives

The objectives of this course are to

- Understand the different types of drilling.
- Impart knowledge on drilling rig components.
- Illustrate mud circulating system.
- Identify well borehole problems

Course Out comes

On Completion of the course, the students shall be able to-	
C01:	Understand overview of drilling and rig components
C02:	Understand selection of drill string and drill bit
C03:	Understand mud circulation system
C04:	Understand basics of casing and cementing
C05:	Understand borehole problems

Syllabus

UNIT-I

Overview of Drilling

Drilling planning approaches, drilling team, types of drilling, power systems.

Hoisting System

Derrick & substructure, steel derricks, making a connection, tripping operation, draw-works.

Travelling Assembly

Crown block, travelling block & hook, drilling line, static crown load.

UNIT-II

Drill String

Drill string, drill string components, and design, stretch of drilling pipe, drill pipe maintenance

Drill Bits

Types of bits, standard classification of bits, failure mechanism of bits, bit selection and evaluation

UNIT-III

Drilling Mud Engineering

Introduction, functions, types of mud, fundamental properties of mud, mud circulation, mud conditioning system

Unit-VI

Casing & Cementing

Casing, functions, types, casing policy, casing design basics, cementing, functions of cement, cement classes, casing accessories, setting casing, single stage and two stage cementing.

Unit-V

Borehole Problems

Introduction, pipe sticking, differential sticking, mechanical sticking, and key seating; sloughing shale, lost circulation zones.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B. Tech. II Sem. (6 th Semester)			
Course Code	Open Pit Slope Analysis and Design (Open Elective-II)				
Teaching	Total contact hours - 48	L	T	P	C
Prerequisites: Nil		3	0	0	3

Course Objectives

1. To impart the knowledge on slopes, slope failures and factors that influence slopes.
2. To discuss the geotechnical parameters required for stability studies of a slope.
3. To elaborate the shear strength of intact rock mass and jointed rock mass.
4. To explain the impacts of water in slope stability.
5. To inculcate various methods and techniques used to assess the slope stability.

Course Outcomes

On Completion of the course, the students will be able to-	
C01:	Classify various modes of slope failure.
C02:	Comprehend and analyse the geotechnical parameters required for slope stability analysis.
C03:	Interpret the shear strength of intact rock mass and jointed rock mass.
C04:	Analyse the flow of water in slope stability.
C05:	Summarize various methods and techniques used to assess the slope stability.

Syllabus**UNIT-I****Introduction**

Types and formation of slopes in surface mines; Mechanism of common modes of slope failure; Factors influencing stability of slopes and planning of slope stability investigations.

UNIT-II**Geotechnical Information**

Geotechnical data required for high wall slope stability studies; Collection of geological data and their interpretation for stability studies of high wall slopes.

UNIT-III**Slope Stabilization methods**

Construction and Stabilization of Slopes, Construction and Stabilization of dumps, Construction of gabion wall, wire netting, preventing landslides, preventing debris from falling.

UNIT-IV

Slope Monitoring Instruments

Conventional slope monitoring system; Automatic deformation system; Sub-lateral movement monitoring system; Real-time monitoring system.

UNIT-V

Analysis and Design of Pit Slopes and Waste Dumps

Slope stability assessment methods and techniques; Analysis and design criteria and methodology for high wall slopes and backfill and waste dumps; Introduction to Slope Stability Software.

OPEN ELECTIVE-2 HYBRID AND ELECTRIC VEHICLES					

Course Objectives:

1. Understanding various aspects of hybrid and electric drive trains such as their configuration, types of electric machines that can be used, energy storage devices, etc.
2. Get exposed to research and development challenges involved in various types of fuel cells.

Course Outcomes:

On Completion of the course, the students shall be able to-	
CO1:	Grade hybrid electric technology and electronic drive trains
CO2:	Construction of hybrid electric vehicles
CO3:	Demonstrate electric vehicle components
CO4:	Construction of Electric vehicle technology
CO5:	Operate fuel cell technology and Identification of fuel cell based vehicles

Syllabus

UNIT I –ELECTRIC DRIVETRAINS

Basic concept of electric traction, introduction to various electric drive-train topologies. Electric Propulsion unit: Introduction to electric components used in electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives.

UNIT II – HYBRID ELECTRIC TECHNOLOGY

Impact of modern drive-trains on energy supplies. Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis, Plug-in hybrid electric vehicles.

UNIT III – HYBRID VEHICLE TECHNOLOGY

Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, supporting subsystems. Energy Management Strategies in hybrid and electric vehicles. Case Studies: Design of a Hybrid Electric Vehicle (HEV), Design of a Battery Electric Vehicle (BEV).

UNIT IV – ARCHITECTURE OF HYBRID ELECTRIC VEHICLES

Principles of Hybrid Electric Drive trains, Architectures – Electrical distribution, Hybrid control Strategies – Parallel Hybrid, Series Hybrid - Practical Models – Toyota Prius, Honda Insight. Heavy Vehicles - Hybrid Electric Heavy Duty Vehicles.

UNIT V – FUELCELL TECHNOLOGY

Structures, Operations and properties of Fuel cells – (Phosphoric Acid Fuel cell, Proton Exchange membrane Fuel cell, Direct Methanol fuel cell, Alkaline Fuel Cells, Solid Oxide Fuel Cell, Molten Carbonate Fuel Cell)

FUEL CELL BASED VEHICLES STRUCTURE

PEMFC: Operating principle DMFC: Operating principle – Methanol crossover.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	B.Tech – III - II			
Course Code	OPERATIONS MANAGEMENT (Common to all Branches)				
Teaching	Total contact hours-45	L	T	P	C
Prerequisite(s): Basic knowledge of business production and operations system.		3	0	0	3

Course objectives:

1. It aims to provide students with a critical understanding of the scope and strategic importance of Operations management.
2. To make the students to know about role of operations managers and an appreciation of the interaction of operations with the organisation, employees and customers.
3. To impart the knowledge in the minds of the students how to maximize efficiency while producing goods.

Course outcomes:

On Completion of the course, the students will be able to-	
CO1:	Identify the elements of operations management and various transformation processes to enhance productivity and competitiveness.
CO2:	Analyze and evaluate various facility alternatives and their capacity decisions, develop a balanced line of production & scheduling and sequencing techniques in operation environments.
CO3:	Develop aggregate capacity plans and MPS in operation environment.
CO4:	Plan and implement suitable materials handling principles and practices in the operations.
CO5:	Plan and implement suitable quality control measures in Quality Circles to TQM.

UNIT I

Introduction to Operation Management: Nature & Scope of Operation/ Production Management, Relationship with another functional areas, Recent trend in Operation Management, Manufacturing & Theory of Constraint, Types of Production System, Just in Time (JIT) & lean system.

UNIT II

Product Design & Process Selection : Stages in Product Design process, Value Analysis, Facility location & Layout: Types, Characteristics, Advantages and Disadvantages, Work measurement, Job design.

(AUTONOMOUS)

Approved by AICTE, Accredited by NBA & NAAC 'A' Grade, Recognized under 2(f) and 12(b) of UGC, Permanently Affiliated to JNTUK, Kakinada.

UNIT III

Forecasting & Capacity Planning: Methods of Forecasting, Overview of Operation Planning, Aggregate Production Planning, Production strategies, Capacity Requirement Planning, MRP, Scheduling, Supply Chain Management, Purchase Management, Inventory Management.

UNIT IV

Productivity Concept : Factors affecting Productivity – Job Design – Process Flow Charts – Work study-Methods Study – Work Measurement – Engineering and Behavioral Approaches.

UNIT V

Quality Management: Quality- Definition, Dimension, Cost of Quality, Quality Circles- Continuous improvement (Kaizen), Statistical Quality Control, Variable & Attribute, Process Control, Control Charts -Acceptance Sampling Total Quality Management (TQM)

Regulation GRBT- 20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th Semester)			
CourseCode	RADAR ENGINEERING				
Teaching	Total Contact Hours - 45	L	T	P	C
Prerequisites: Knowledge of Analog communications, Electromagnetic theory and Antenna and Wave propagation		3	1	-	3

Course Objective:

The student will

- Understand the basics of RADAR systems and its components.
- Understand the basic concepts of ambiguity functions, CW Radar, FM-CW Radar and their applications.
- Understand concept of MTI and Pulse Doppler Radar
- Understand concepts about different trackers and radar antennas
- Understand the concept of Noise and radar receivers.

Course Outcomes:

After going through this course, the student will be able to

CO1	Acquire the knowledge to apply and design required parameters for RADAR system.
CO2	Analyze the working principle of CW and Frequency Modulated Radar.
CO3	Analyze the working principle of MTI and pulse Doppler Radar.
CO4	Acquire the knowledge of different types of radars and radar trackers
CO5	Acquire the knowledge about different types of radar receivers.

Unit I Introduction

Nature of Radar. Maximum Unambiguous Range. Radar Waveforms, Simple form of Radar Equation, Radar Block Diagram and Operation, Radar Frequencies and Applications. Related Problems. Radar Equation: Prediction of Range Performance, Minimum Detectable Signal, Receiver Noise and SNR, Integration of Radar Pulses, Radar Cross Section of Targets (simple targets-sphere, cone-sphere). Transmitter power.

Unit II

PRF and Range Ambiguities, System Losses (Qualitative treatment). Related Problems. CW and Frequency Modulated Radar: Doppler effect, CW Radar – Block Diagram, Isolation between

Transmitter and Receiver, Non-zero IF Receiver, Receiver Bandwidth Requirement, Applications of CW radar. FMCW Radar, Range and Doppler Measurement, Block Diagram and Characteristics (Approaching/ Receding Targets), FM-CW altimeter, Measurement Errors, Multiple Frequency CW Radar.

Unit III

MTI and Pulse Doppler radar

Introduction, Principle, MTIR Radar with Power Amplifier Transmitter and Power Oscillator Transmitter, Delay Line Cancellers – Filter Characteristics, Blind Speeds, and Double Cancellation staggered PRFs. Range Gated Doppler Filters. MTI Radar Parameters, Limitations to MTI Performance. Non-coherent MTI, MTI versus Pulse Doppler radar. Tracking Radar: Tracking with Radar, Sequential Lobing, Conical Scan, Mono-pulse tracking.

Unit IV

Radar Amplitude Comparison Mono-pulse (one – and two –coordinates), Phase Comparison Mono-pulse. Target Reflection Characteristics and Angular Accuracy. Tracking in Range Acquisition and Scanning Patterns. Comparison of Trackers. Radar Antennas – Antenna Parameters, Reflector Antennas, Lens Antennas, Lens Antennas Cosecant- Squared Antenna Pattern, Radomes.

Unit V

Electronically Steered Phased Array Antennas, Phase Shifters, Frequency – scan Arrays, Radiation for Phased Array, and Architecture for Phased Arrays. Detection of Radar Signals in Noise: Introduction, Matched Filter Receiver – Response Characteristics and Derivation, Correlation detection, Detection criteria, Detector Characteristics, Automatic Detection, Constant False Alarm Rate Receiver. Radar Receivers – Noise Figure and Noise Temperature. Displays – types. Duplexer – Branch type and Balanced type, Circulators as Duplexers. Introduction to Phased Array Antennas- Basic Concepts, Radiation Pattern. Beam Steering and Beam Width changes, Series versus Parallel Feeds. Applications, Advantages and Limitations.

TEXT BOOKS:

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 semester)			
CourseCode	MOBILE & CELLULAR COMMUNICATION				
Teaching	Total Contact Hours - 45	L	T	P	C
Prerequisites: Knowledge of Signals and Systems, Digital Signal Processing		3	0	-	3

Course Objectives:

6. To understand the fundamental concepts and applications of Image Processing.
7. To understand the concepts of Intensity Transformations and Spatial Filtering.
8. To understand Image Restoration and Reconstruction.
9. To understand the concepts of Color image processing.
10. To understand Morphological image processing, Image segmentation.

Course Outcomes:

On Completion of the course, students will be able to	
CO1	Identify the limitations of conventional mobile telephone systems; understand the concepts of cellular systems
CO2	Understand the frequency management, channel assignment strategies and antennas in cellular systems
CO3	Understand the concepts of handoff and architectures of various cellular system

UNIT I

CELLULAR MOBILE RADIO SYSTEMS: Introduction to Cellular Mobile System, uniqueness of mobile radio environment, operation of cellular systems, consideration of the components of Cellular system, Hexagonal shaped cells, Analog and Digital Cellular systems.

CELLULAR CONCEPTS: Evolution of Cellular systems, Concept of frequency reuse, frequency reuse ratio, Number of channels in a cellular system, Cellular traffic: trunking and blocking, Grade of Service; Cellular structures: macro, micro, pico and femto cells; Cell splitting, Cell sectoring.

UNIT II

INTERFERENCE: Types of interferences, Introduction to Co-Channel Interference, real time Co-Channel interference, Co-Channel measurement, Co-channel Interference Reduction Factor, desired C/I from a normal case in a omni-directional Antenna system, design of Antenna system, antenna parameters and their effects, diversity receiver, non-co-channel interference-different types.

UNIT III

FREQUENCY MANAGEMENT AND CHANNEL ASSIGNMENT: Numbering and grouping, setup access and paging channels, channel assignments to cell sites and mobile units: fixed channel and non-fixed channel assignment, channel sharing and borrowing, overlaid cells. **CELL COVERAGE FOR SIGNAL AND TRAFFIC:** Signal reflections in flat and hilly terrain, effect of human made structures, phase difference between direct and reflected paths, straight line path loss slope, general formula for mobile propagation over water and flat open area, near and long distance propagation, antenna height gain, form of a point to point model.

UNIT IV

HANDOFF STRATEGIES:

Concept of Handoff, types of handoff, handoff initiation, delaying handoff, forced hand-off, mobile assigned handoff, intersystem handoff, soft and hard hand offs, vehicle locating methods, dropped call rates and their evaluation.

UNIT V

DIGITAL CELLULAR NETWORKS: GSM architecture, GSM channels, multiple access schemes; TDMA, CDMA, OFDMA. 3G and 4G Wireless Standards GSM, GPRS, WCDMA, LTE, Wi-MAX, Introduction to 5G standards.

TEXT BOOKS:

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 semester)			
CourseCode	DIGITAL IMAGE PROCESSING (Professional Elective)				
Teaching	Total Contact Hours - 50	L	T	P	C
Prerequisites: Knowledge of Signals and Systems, Digital Signal Processing		3	0	-	3

Course Objectives:

1. To understand the fundamental concepts and applications of Image Processing.
2. To understand the concepts of Intensity Transformations and Spatial Filtering.
3. To understand Image Restoration and Reconstruction.
4. To understand the concepts of Color image processing.
5. To understand Morphological image processing, Image segmentation.

Course Outcomes:

On Completion of the course, students will be able to	
CO1:	Understand the fundamental steps in digital image processing.
CO2:	Examine various types of images, intensity transformations and spatial filtering.
CO3:	Develop Fourier transform for image processing in frequency domain.
CO4:	Evaluate the methodologies for image restoration and segmentation.
CO5:	Perform all morphological operations on images and image segmentation.

UNIT – 1 Digital Image Fundamentals

Digital Image Fundamentals: Fundamental steps in DIP, Components of digital image processing, elements of visual perception, Structure of the human eye, Image formation in the eye, Brightness adaptation and discrimination, Image sensing and acquisition, Sampling and quantization of images, Representation of digital image, Spatial and gray level resolution, zooming and shrinking, some basic relationships between pixels.

UNIT – 2 Image Enhancement in Spatial & Frequency Domain

Gray Level Transformations, Piecewise linear transformation, Histogram Processing, Enhancement Using Arithmetic/Logic Operations. Basics of Spatial Filtering, Smoothing and Sharpening Spatial Filters, Use of first order and second order derivative in enhancement.

Two-dimensional Fourier Transform, some properties of 2-D Discrete Fourier transform, correspondence between filtering in spatial and frequency domain, Smoothing and Sharpening frequency domain filters, Homomorphic Filtering.

UNIT – 3 Image Restoration

A model of the image Degradation/Restoration process, Noise models, Restoration in the presence of noise only - Spatial Filtering, Periodic Noise Reduction by frequency domain filtering, Linear Position Invariant Degradations, Estimation of the degradation function, Inverse filtering, Minimum mean square error(Wiener) filtering.

UNIT-4 Colour Image Processing

Color fundamentals, color models, pseudo color image processing, basics of full-color image processing, color transforms, smoothing and sharpening, color segmentation

UNIT – 5 Morphological Image Processing and Image Segmentation

Preliminaries, Erosion and dilation, opening and closing, the Hit-or-miss transformation, some Basic Morphological algorithms, Gray scale morphology.

Image Segmentation: Detection of Discontinuities (point, line and edge), Edge Linking and Boundary Detection, Thresholding, Basic global thresholding, Adaptive Thresholding, Region-Based Segmentation, region growing, splitting and merging.

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th semester)			
Course Code	VLSI DESIGN				
Teaching	Total Contact Hours – 45	L	T	P	C
Prerequisites: Fabrication of Integrated circuits, Bipolar technology, Layout design, Scaling factors		3	1	-	3

Course Objectives:

1. Use the circuit analysis model in analysis of CMOS digital electronics circuits, including logic components and their interconnects.
2. Learn the various fabrication steps of IC and come across basic electrical properties of MOSFET.
3. Apply CMOS technology-specific layout rules in the placement and routing of transistors and interconnect and to verify the functionality, timing, power and parasitic effects.
4. Understand the concepts and techniques of modern integrated circuit design and testing (CMOS VLSI).
5. Design static CMOS combinational and sequential logic at the transistor level, including mask layout.

Course Outcomes:

On Completion of the course, students will be able to	
CO1:	Analyze the fabrication process of CMOS digital circuits.
CO2:	Apply the concept of design rules during the layout of a circuit.
CO3:	Analyze the architectural issues of subsystem design.
CO4:	Implement circuit through various design styles (semi-Custom, Full Custom).
CO5:	Apply the clock mechanism, demonstrate the architectural of FPGA.

UNIT-1CMOS & BI-POLAR TECHNOLOGY

Introduction to IC Technology, IC production process, Enhancement and Depletion modes of MOS transistor, CMOS Fabrication processes, Comparison between CMOS and Bipolar technologies, Current and voltage relations of MOS circuit, MOS transistor transconductance and output conductance, NMOS Inverter, Pull-up to Pull-down Ratio for NMOS inverter driven by another NMOS inverter, The CMOS Inverter, Bi-CMOS Technology, Latch-up in CMOS circuits.

UNIT-2 MOS AND BI-CMOS CIRCUIT DESIGN PROCESSES: MOS Layers, Stick Diagram, Stick Diagrams of NMOS inverter, CMOS inverter, CMOS NAND, CMOS NOR gate. Design Rules and Layout, λ -based design rules, 2 μ m Double Metal double Poly design rules, CMOS/Bi-CMOS rules, 1.2 μ m Double Metal, Double Poly CMOS rules, Layout Diagrams of NAND, NOR gates and CMOS inverter and NMOS inverter.

UNIT-3 BASIC CIRCUIT CONCEPTS & SCALING FACTORS

Sheet resistance of MOS transistors and Inverters, Standard unit of capacitance, The Delay Unit, Inverter Delays, Propagation Delays, Fan-in and fan-out characteristics, Realization of gates using NMOS, PMOS and CMOS technologies. Scaling models, Scaling factors for device parameters, Limits due to sub threshold currents, current density limits on logic levels and supply voltage due to noise.

UNIT-4 SUBSYSTEM DESIGN:

Architectural issues, switch logic, Gate logic, examples of structured design, clocked sequential circuits, system considerations, general considerations of subsystem design processes, an illustration of design processes.

UNIT-5 VLSI DESIGN ISSUES & FPGA

VLSI Design issues and design trends, design for testability, BIST, stuck at faults, mixed signal design, ASIC design flow, FPGA design flow, Basic FPGA architecture, FPGA configuration modes, FPGA design flow, FPGA design families

TEXT BOOKS:

Regulation GRBT-20 Course Code	MICROWAVE & OPTICAL COMMUNICATION ENGINEERING LABORATORY	III B.Tech. II Sem (6 th Semester)			
Teaching	Total Contact Hours – 36	L	T	P	C
Prerequisites: Basic knowledge of microwave engineering and fiber optic communication		0	0	3	1.5

Course Objectives:

1. To learn the characteristics of Microwave components.
2. To gain hands on experience by exposing the students to various microwave components.

Course Outcomes:

On Completion of the course, students will be able to	
CO 1:	Analyze the working of several microwave components
CO 2:	Perform measurements with the microwave equipment
CO 3:	Measure several waveguides, antenna related parameters and analyze the performance characteristics

List of Experiments:

1. Reflex Klystron Characteristics
2. Gunn diode Characteristics
3. Attenuation Measurement
4. Directional Coupler Characteristics
5. VSWR Measurement
6. Impedance and Frequency Measurement

7. Waveguide Parameters Measurement
8. Scattering Parameters of Circulator
9. Scattering Parameters of MAGIC TEE
10. Characterization of LED
11. Measurement of data rate for Digital Optical Link
12. Intensity of modulation of laser Output Through an optical fiber
13. Measurement of numerical aperture
14. Measurement of losses for Analog Optical Link
15. Measurement of gain of an antenna
16. Study of Cellular Communication
17. Measurement of Dielectric Constant of a given material
18. Setup of Time Division Multiplexing using fiber optics
19. Antenna Measurement

CO-PO Mapping:

1: Slight (Low) 2: Moderate (Medium) 3: Substantial (High) '-': No Correlation

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th Semester)			
Course Code	MICROPROCESSORS AND MICROCONTROLLERS LAB				
Teaching	Total Contact Hours - 36	L	T	P	C
Prerequisites: Basic knowledge of 8086 Microprocessors, Assembly & C Programming		0	-	3	1.5

Course Objectives:

1. Understand the basic concepts of 8086 programming and Interfacing.
2. Learn architecture of AVR Microcontroller, Importance of Bit addressability, function of Special registers and basic concepts of Assembly Language program
3. Learn the concepts of Embedded C Programming and Interfacing
4. Learn basic concepts of AVR Microcontroller Interfacing with the real world through different devices.

On Completion of the course, students will be able to	
CO1:	Develop Assembly Language Programme for various arithmetic and logical operations.
CO2:	Develop Assembly Language Programme for various string related operations.
CO3:	Develop 'C' Programme for interfacing of various peripherals to 8086 microprocessors.
CO4:	Develop 'C' Programme for interfacing of various peripherals to AVR microcontrollers.

EXPERIMENTS TO BE DONE USING DIGITAL IC

MASM programs:

1. Arithmetic operation- Multi byte Addition and Subtraction, Multiplication and Division- Signed and using arithmetic operation, ASCII- Arithmetic operation.
2. Logical Shifting Operations-Left shift, Right shift, rotate left, rotate right, converting packed BCD to Unpacked BCD, BCD to ASCII conversion.
3. Using string operation and Instruction prefix: Move Block, Reverse string, Inserting, Deleting of string.
4. String sorting: Ascending order, Descending order, String comparison, Length of the string.

INTERFACING WITH 8086 (Minimum of 4 experiment has to done)

1. Stepper motor interfacing
2. DC motor interfacing
3. Seven segment Display
4. Traffic light interfacing
5. Analog to Digital converter
6. LCD Display

INTERFACING WITH AVR MCU (Minimum of 4 experiment has to done)

1. Stepper motor interfacing
2. DC motor interfacing
3. Seven Segment Display
4. Analog to Digital converter
5. LCD display
6. LED Blinking

Regulation GRBT- 20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6 th Semester)			
CourseCode	DIGITAL SIGNAL PROCESSING LAB				
Teaching	Total Contact Hours - 45	L	T	P	C
Prerequisites: Linear system theory and Fourier Transforms, Digital Signal Processing, Basic Knowledge of MATLAB and C Programming		0	0	3	1.5

Course Objectives:

1. Knowledge to represent real world signals in digital format and understand transform-domain (Fourier and z-transforms) representation of the signals.
2. Learn to apply the linear systems approach to signal processing problems using high-level programming language.
3. Learn the basic architecture of microprocessors and digital signal processors and to learn about to implement linear filters in real-time DSP chips.

On Completion of the course, students will be able to	
CO1:	Design and implement a DSP system using tools like MATLAB
CO2:	Analyze and describe the functionality of a real world DSP system
CO3:	Design and execute the creation of a complex DSP system
CO4:	Apply DSP system design to real world applications

(Note: Students have to perform at least FOUR experiments from each part.)

PART-A

List of the Experiments

1. Generation of DT signals.
2. Verify the Linear Convolution of two DT signals
 - a) Using MATLAB
 - b) Using Code Composer Studio(CCS)
3. Verify the Circular Convolution of two DT signals
 - a) Using MATLAB
 - b) Using Code Composer Studio(CCS)
4. Find the sum of DT sinusoidal signals.
5. Computation of Discrete Fourier

Transform(DFT) and InverseDiscrete
Fourier Transform (IDFT)

- a) Using MATLAB
 - b) Using Code Composer Studio(CCS)
6. Transfer Function Stability Analysis:
using pole-zero plot, bodePlot
and Nyquist plot.

PART-B

Following Experiments are to be done using a TIDSP Starter Kit.

- 7. Generation of a sinusoidal signal.
- 8. Linear and circular convolution of DT sequences.
- 9. Compute N-point DFT of a given DT sequence.
- 10. Design and implementation of FIR filters.
- 11. Design and implementation of IIR filters.

PART-C

Following Experiments are to be done using Cypress FM4 Starter Kit.

- 12. Verification of sampling theorem.
- 13. Implementation of FFT algorithm.
- 14. Implementation of FIR filters.
- 15. Implementation of IIR filters.

CO-PO Mapping:

Regulation GRBT-20	Godavari Institute of Engineering & Technology (Autonomous)	III B.Tech. II Sem (6th Semester)			
CourseCode	ARM BASED/ AURDINO BASED PROGRAMMING (ECE)				
Teaching	Totalcontacthours-36	L	T	P	C
Prerequisite(s): Knowledge of Microcontroller and Arduino		-	-	3	1.5

Course Outcomes:

On Completion of the course, the students will be able to-	
CO1:	Comprehend Microcontroller-Transducers Interface techniques
CO2:	Establish Serial Communication link with Arduino
CO3:	Analyze basics of SPI interface.
CO4:	Interface Stepper Motor with Arduino
CO5:	Analyze Accelerometer interface techniques

LIST OF EXPERIMENTS:

1. Measure Analog signal from Temperature Sensor
2. Generate PWM output
3. Drive single character generation on Hyper Terminal
4. Drive a given string on Hyper Terminal
5. Full duplex Link establishment using Hyper terminal
6. Drive a given value on a 8 bit DAC consisting of SPI
7. Drive Stepper motor using Analog GPIOs
8. Drive Accelerometer and Display the readings on Hyper Terminal

COMPONENTS/ BOARDS :

1. Arduino Duemilanove Board
2. Arduino Software IDE
